# Brevetti Stendalto

Brevetti Stendalto is the name of the Company founded almost 40 years ago when a highly dynamic new demand, emerging from the boost of automation concepts, was spreading over the most developed industrialized countries.

At that time, Mr. Giovanni Mauri (President and founder of Brevetti Stendalto) designed and started proposing nylon cable chains to be applied where steel cable chains were too heavy and expensive to fulfil customers' needs.

Looking beyond, he got off more than a new line of products, he gave the original profile to the Company: a successful collection of innovation, technical support, pragmatic solutions and products with the best cost & benefit ratio, able to give customers a real added value to the long-term partnership with Brevetti.

The constant evolution of the Company is presently borne through a wide range of plastic, steel and stainless steel chains for all kinds of applications, new modern premises in Monza and Mesero, branches in France and Germany and a consolidated worldwide sales network.

1989  
Patent for the circular nylon cable chain.

Glancing at short-term future, Brevetti is working on three main directions: development of customized chains for special projects, support to buyers and designers to make their choices more efficient through a real problem-solving approach, and extension of our range of standard products,

The latter, in particular, is necessary to meet the newest market requirements for higher performances with acceptable costs. Brevetti's greater and greater experience in all industrial sectors makes it easier.

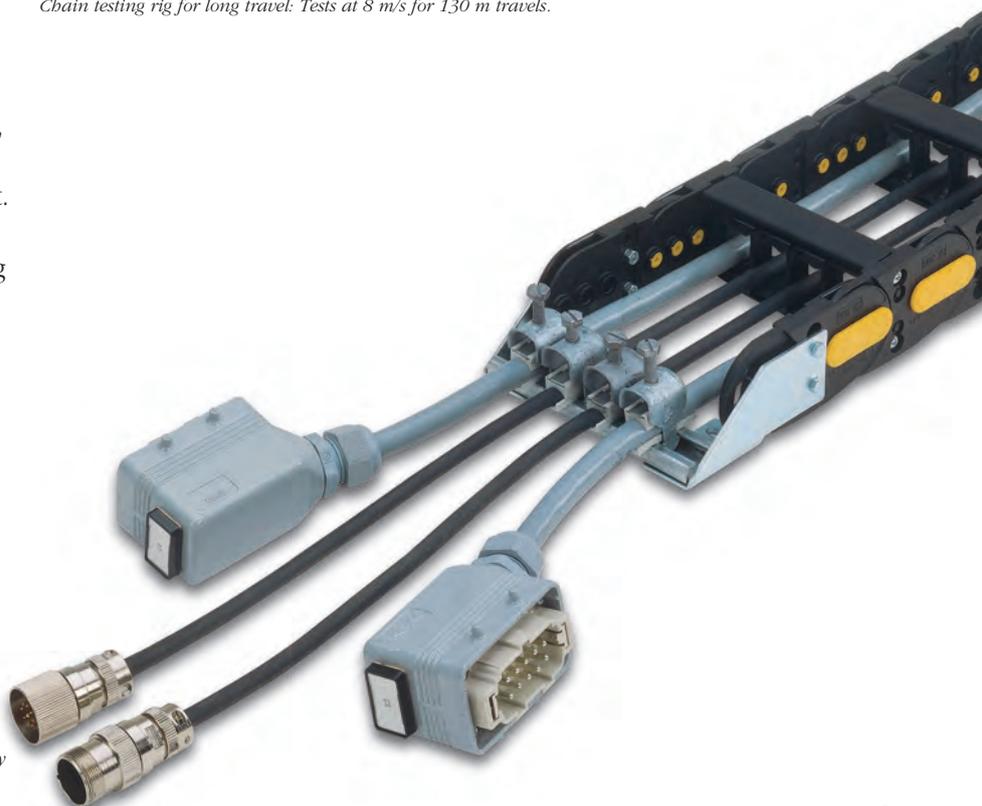

We in Brevetti believe that some special applications, such as offshore platforms and harbour cranes, must be faced with non-ordinary means. That is why we decided to give our customers the support of a "Special Projects Division" available to study customized solutions all over the world.

We always keep in mind that our customers have to be "free to project". This is Brevetti Stendalto's philosophy, and to empower it, we can offer our "Total Chain System", a new concept of cable chains completely finished with extra flexible cables and connectors. From the customer's point of view, it means saving costs due to wiring, assembling and installation time, reducing possible problems, and being certain to choose components of the highest reliability available on the market.

So, let's keep on growing together, still going ahead.

*Chain testing rig for long travel: Tests at 8 m/s for 130 m travels.*

*Chain complete with cables and connectors: Plug & Play solution.*

# Versatile Automation

1

*Production moulds are manufactured using modern CNC machine-tools.*

Each aspect of production, whether it be the preparation of moulds and their subsequent shaping or component manufacture and assembly, is monitored closely.

The Company endeavours to adopt the most up-to-date technology available. Considerable resources are invested into this, ensuring the highest standard of products on the market. Production moulds are manufactured using modern CNC machine-tools.

Mould of Light series cable chain.

Brevetti Stendalto manufacturing process (internal moulding department and complete automated assembly lines) ensures quality and short delivery times.

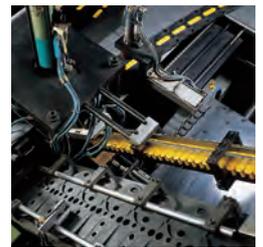

Complete automated assembly lines ensure a high standard of quality chains.

# UNI EN ISO 9001:2015

In Brevetti Stendalto the quality is a result of our activities.  
To be a success and reference company Brevetti Stendalto strives for:

- full satisfaction of our customers ever increasing requests.
- continuing improvement of our company capacities.
- valorization and improvement of our human resources.
- involvement of all our staff in striving for quality assurance.
- careful selection of suppliers and involvement of these in our quality process.
- standardization of production, to assure competitive products.
- innovative products to meet the markets ever increasing requests.
- fast assistance to guarantee the customers reduced breakdown time.

Certificate  
UNI EN ISO 9001:2008

# The Way to Automation

1

Past experience acquired in the marketing of machine tools has prompted Brevetti Stendalto to diversify its proposals. Today, thanks to products from Brevetti Stendalto, present day problems in cable and tubing protection are solved in the best possible way.

Our products can be found in many applications, especially in the field of automated production, for example in industrial robots and machinery for crafting metal, wood and stone.

*Welding robot equipped with nylon chains.*

*Steel chain 30.*

*318 for long travel distance on a crane application.*

*Machine tools equipped with Heavy series cable chains.*

*Circular nylon chains on welding robots.*

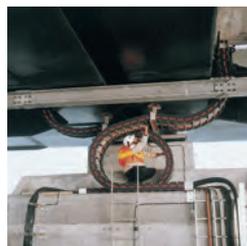

*Welding robot equipped with a nylon cable chain type 510 and guide support.*

Brevetti Stendalto products are used in many, very different, fields of application. We have experience ranging from packaging & automated handling, storage and transportation to providing solutions used in all fields of engineering like mining, offshore drilling, building, in steel works, ports and terminals.

We are always close to our Clients. Our distribution network, consisting of manufacturing plants, sales companies and warehouses, is spread across the entire world.

*35 steel chains with supporting frame applied to De Icing's equipment at München airport (Germany).*

*310 plastic chains and 45 stainless steel chains applied to "Oresund Bridge" between Sweden and Denmark.*

# Always Available

1

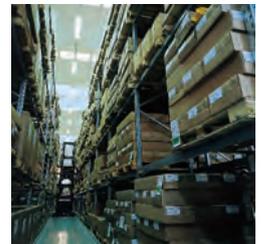

*All cable chains are studied with the support of CAD-CAM systems.*

Each Client is important to Brevetti Stendalto regardless of the needs and the size of his request. Brevetti Stendalto offers professional support for assessing the Client's needs, consultation inherent to the choice of products, design of new products, design of a new product and visiting *client* installations.

## Technical Office

Competence and availability are the key words in technical assistance.

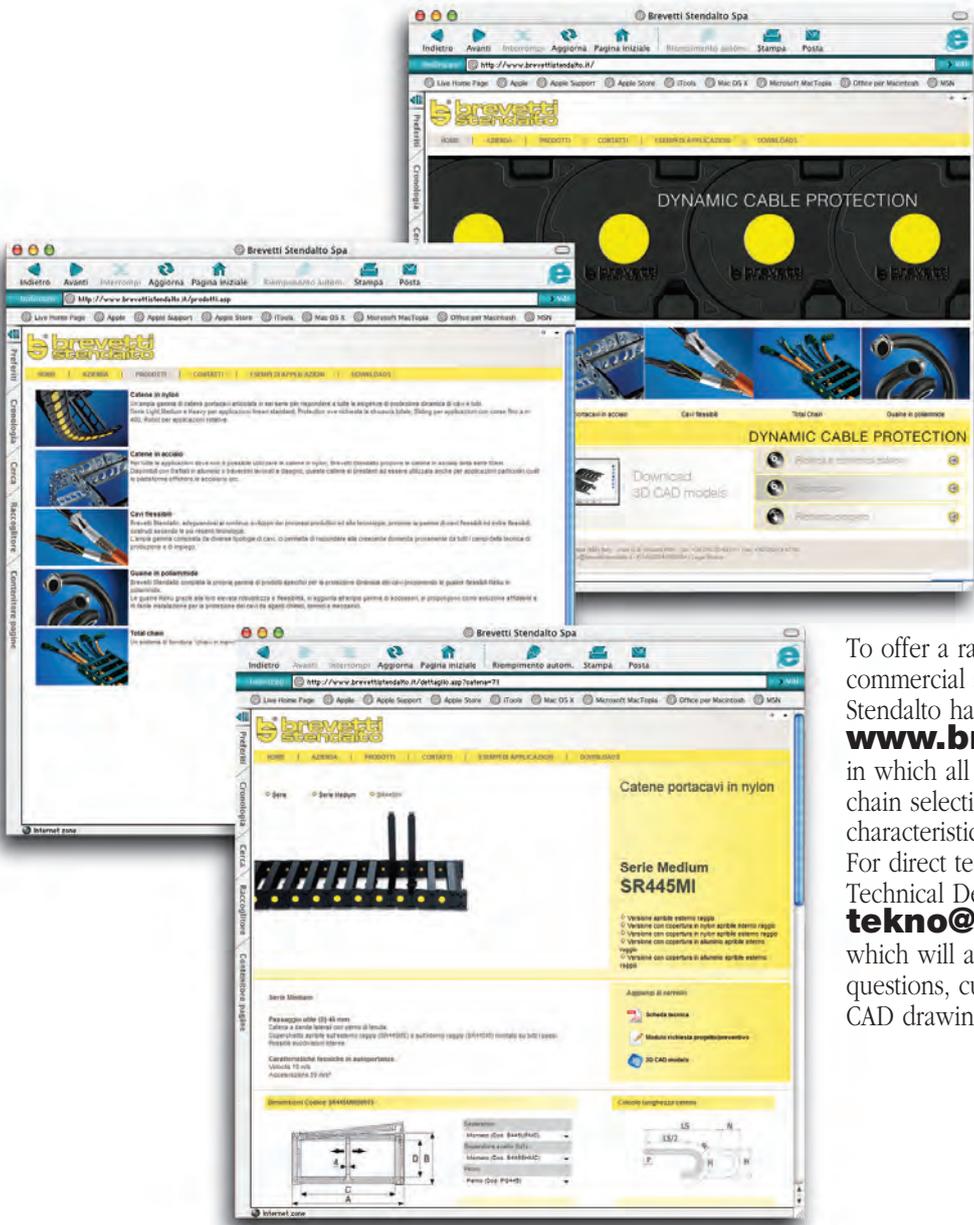

All technical needs and installation characteristic requests are carefully evaluated and verified with the support of informatics and CAD-3D projection that will solve the problems as they arrive.

*Computerised stock management and control system ensures short delivery times.*

*Brevetti Stendalto's technical office is the reference-point for information.*

To offer a rapid and always updated commercial and technical information, Brevetti Stendalto has introduced a new web-site **www.brevettistendalto.it** in which all necessary info is available for fast chain selection and easy downloads of chain characteristics. For direct technical support, please contact our Technical Dept. at **tekno@brevettistendalto.it** which will assist you with specific technical questions, customized chain solution, CAD drawings, etc.

*Brevetti Stendalto is always close to customers, ensuring assistance from project analysis up to final installation and after sales support.*

# Necessary Data to Determine the Type of Cable Chain

The choice of cable chain should not only be based on a mathematical calculation of certain factors but should consider and analyse carefully all the available data. The following information will be provide a basic help in making the right decision.

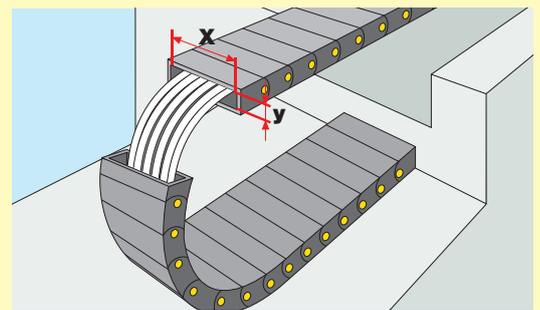

Thanks to thirty years of experience in this sector we have a highly competent technical staff which is at your disposal to help solve any problem relating to the use of cables in any kind of application.

To request a personalised project please fill out the form found on page 257. It will be a pleasure for us to find an immediate solution to your problem.

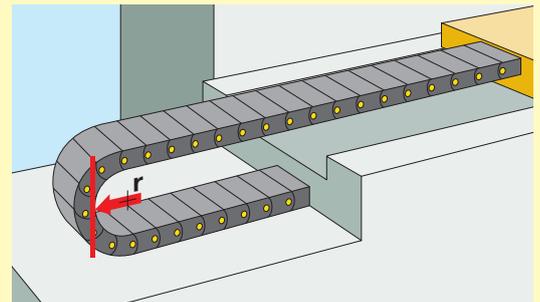

2

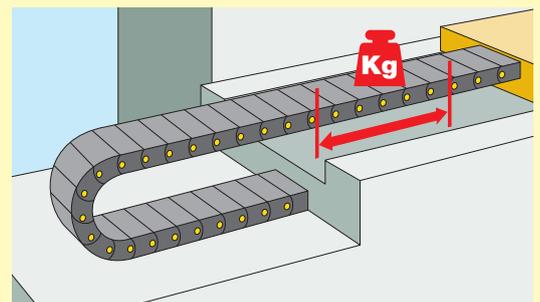

Determining the length of the travelling distance LS.

The dimensions of the cable chain in relationship to the dimensions of cables/hoses.

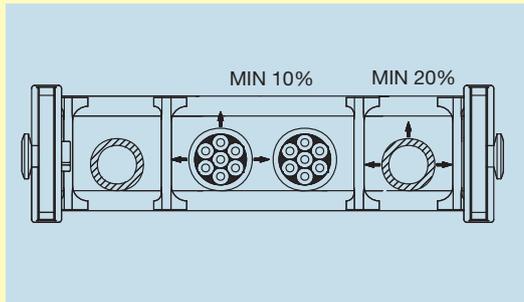

Determining the radius of curvature of the cable chain in relationship to the flexibility characteristics of cables/hoses.

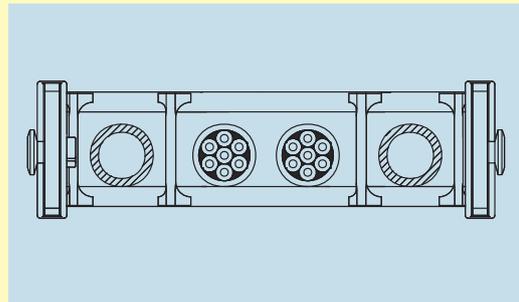

Verifying the self-supporting capacity of the cable chain in relationship to the weight per metre of cables/hoses.

# Placement of Cables/Hoses in the Cable Chains

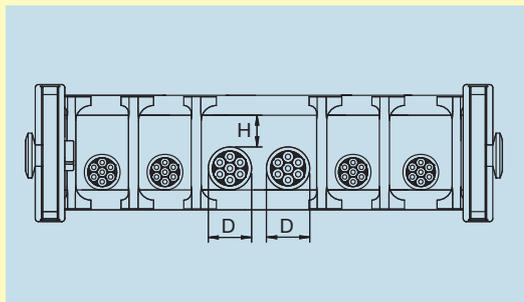

To guarantee that cable chain functions properly and to avoid any damage to the cables/hoses within, certain criteria concerning the placement must be followed:

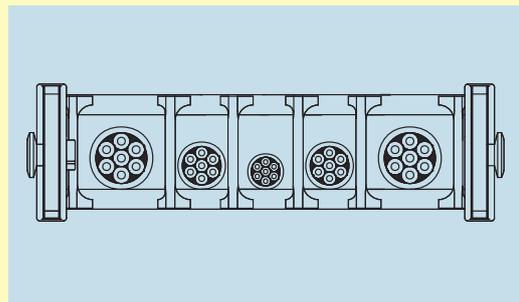

For electric cables a clearance of at least 10% between the placement of the cable and its diameter has to be guaranteed; for hydraulic hoses the clearance should be at least 20%.

Avoid placing cables/hoses that have different sheath finishes so that friction can be eliminated. (e.g. hydraulic cables and hoses).

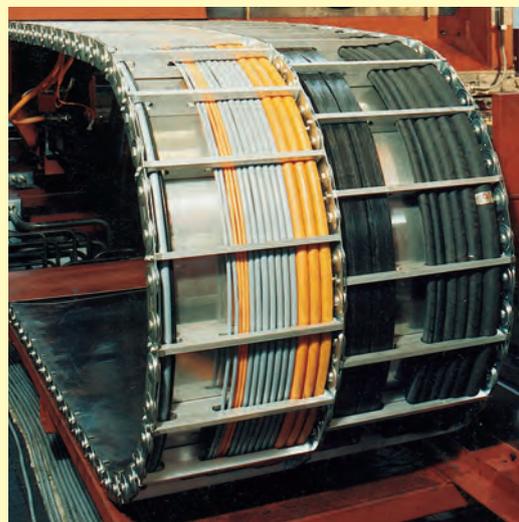

In the application of several cables/hoses it is preferable to avoid them rubbing each other by placing them singularly in the appropriate space and separating them from each other by the separators. If this is not possible, verify that the internal space does not allow the rubbing of the cables/hoses. ( $H < D$ ).

Place cables/hoses in a symmetrical way according to their dimensions and weight placing the largest and heaviest externally and the smaller and lighter internally.

For further information on how to install cables/hoses see page 254.

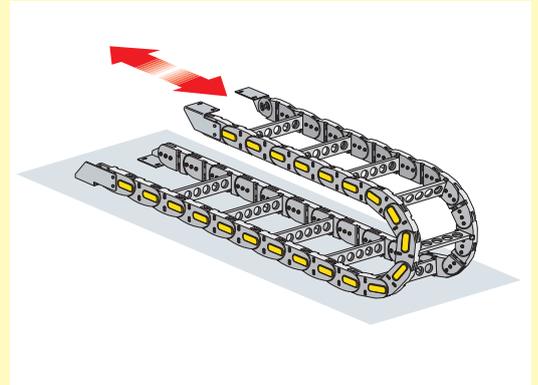

A 30 chain in steel with three bands and separations between electric cables and hydraulic hoses..

# Mounting Variations

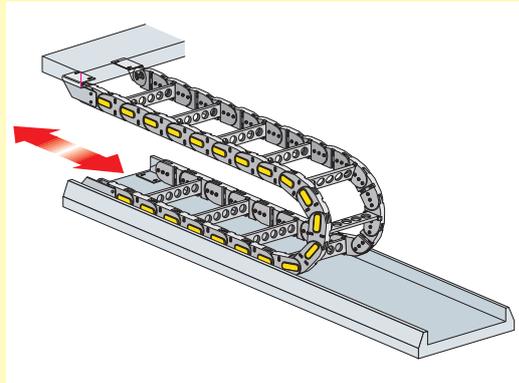

## Chains Placed Horizontally

Brevetti Stendalto chains, thanks to a large range of models and versions, satisfy many requirements in variety and combination of motions. On this page the various combinations of mounting are listed.

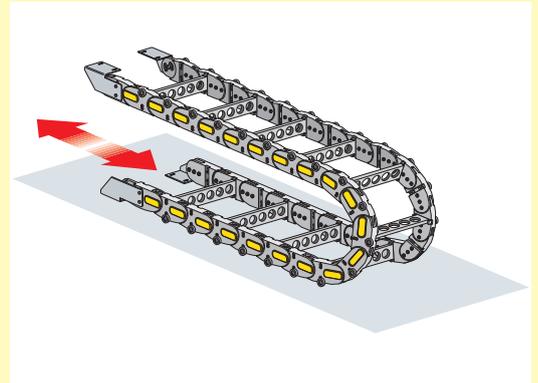

For further information about realising a personalised project please contact our technical department. They are at your disposal to resolve any specific problems you may have and can design according to your particular request.

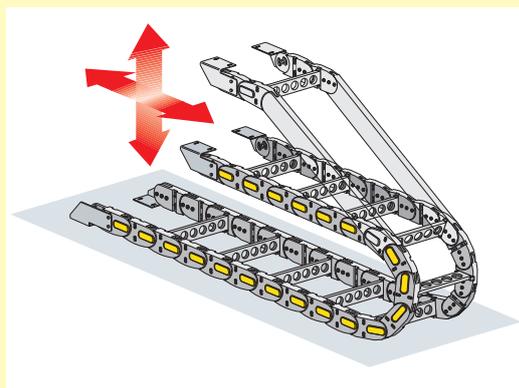

*Horizontal with mobile point above.*

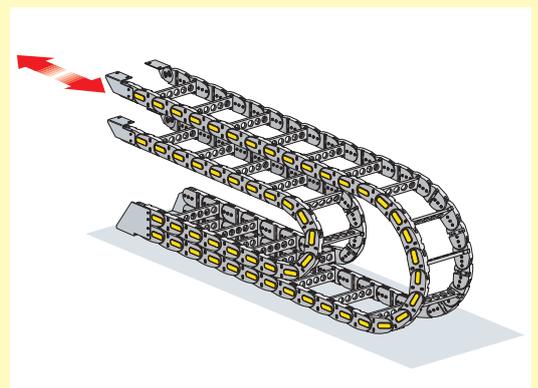

*Horizontal with mobile point below (to the car).*

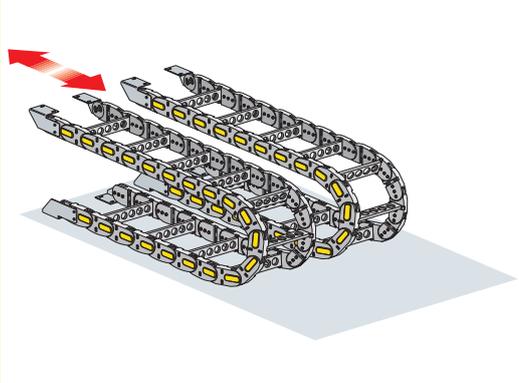

*Horizontal with mobile point below.*

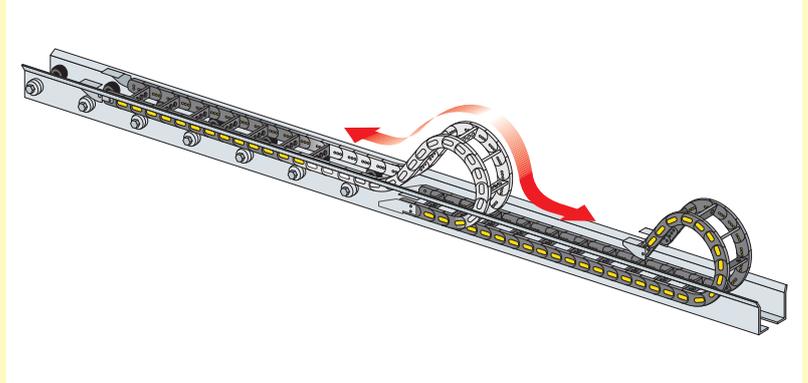

*Combination of both vertical and horizontal movement.*

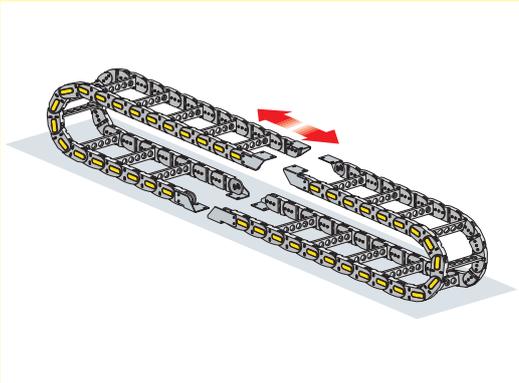

*Superimposed chains.*

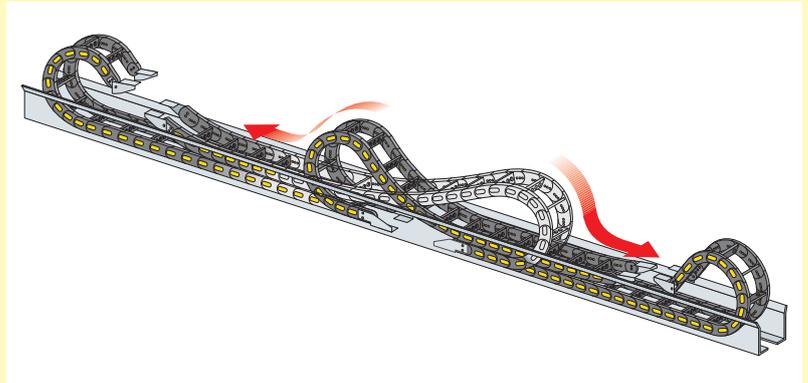

Chains positioned in parallel.

# Mounting Variations

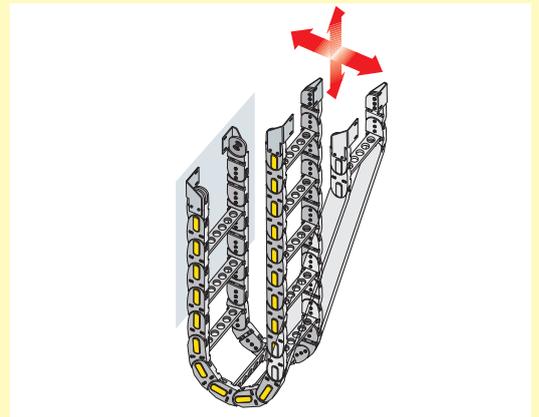

## Chains Placed Vertically

Brevetti Stendalto chains also provide answers to problems concerning vertical motion. Thanks to their particular design Brevetti Stendalto cable chains can also be used in applications with extremely long travel distances.

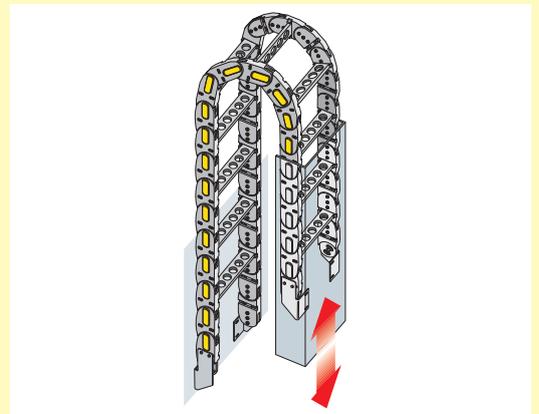

2

nylon chain on machine tool.

### Chains with Circular Motion

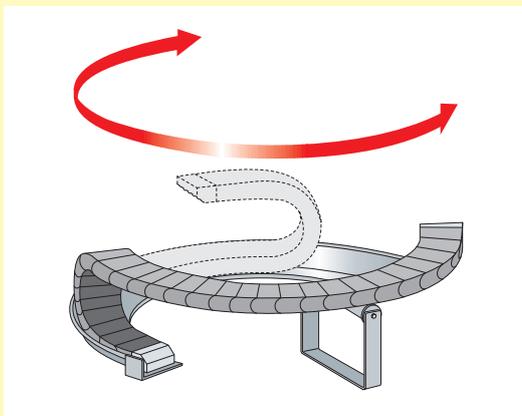

The problems regarding circular motion are easily resolved with the chains from the ROBOT series, an exclusive Brevetti Stendalto product. It is also possible to use the chains in counter-rotation configuration by mounting them on their side.

Chain for circular movement - 1 chain  
(see page 26).

Chain for circular movement - 2 chains  
(see page 26).

ROBOT type chain for circular motion.  
(see page 28).

Robot for welding with chains in nylon.

# Self-Supporting Capacity

A fundamental element in cable chains is the pre-set Z (Fig. A).

This determines the self-supporting capacity, a characteristic which allows the cable chain to support not only its own weight, but also the weight of the cables/hoses placed in it and to keep its parallel or slightly curved upward position (Fig. B).

The diagram of self-supporting capacity (Fig. C), indicates the weight relation of cables/hoses per linear meter to the lengths of self-supporting chain travel. The red-area indicates the difference between min/max chain widths, while the widest version has the lowest self-support capacity. With the application of cable chains with  $\frac{LS}{2}$  and weights not included in the area of the diagram of self-supporting capacity, it's

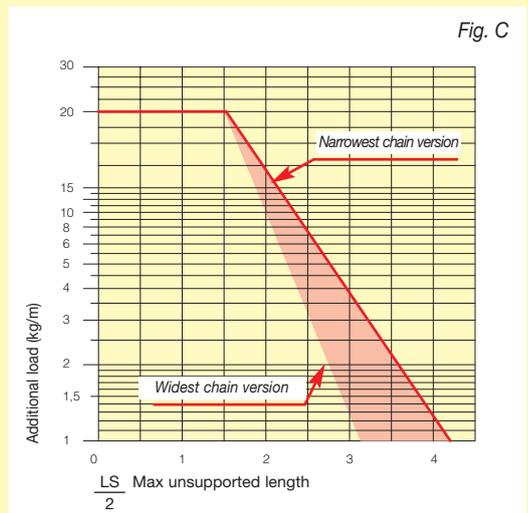

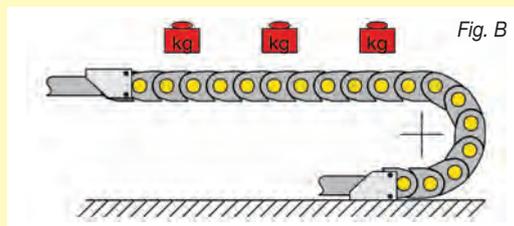

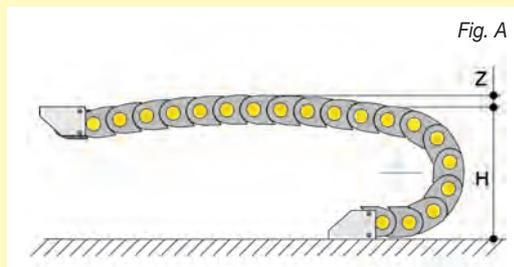

necessary to use the appropriate support rollers (see page 30), in order to confirm chain reliability in exceptional applications.

All the H-heights reported into this catalogue are not including any Z-value due to the preload, therefore, whenever limitations to the maximum allowable height are required, you should refer to Brevetti Stendalto's Technical Dptm.

Brevetti Stendalto chains, thanks to their specific construction, reach remarkably high values of self-supporting capacity and acceleration with long periods of motion, reaching millions of cycles.

For particular applications (e.g. vertical travel), the chains can be provided without pre-set.

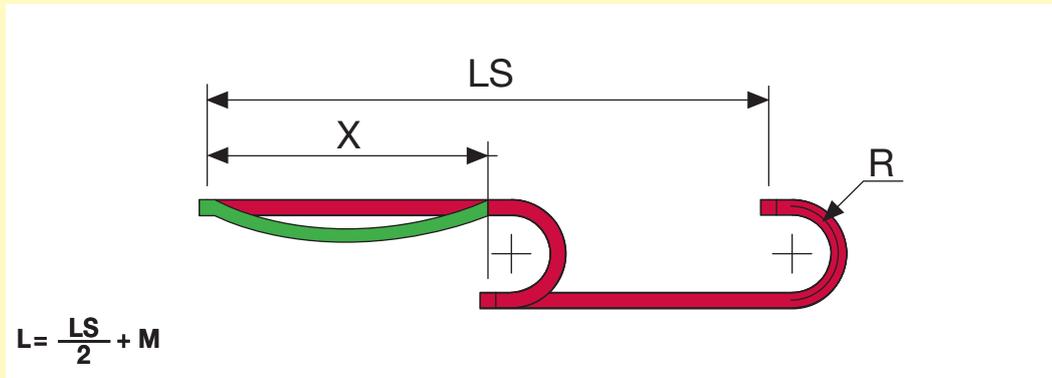

2

Nylon chain, type 310, in a self-supporting state.

# Determining the Chain length

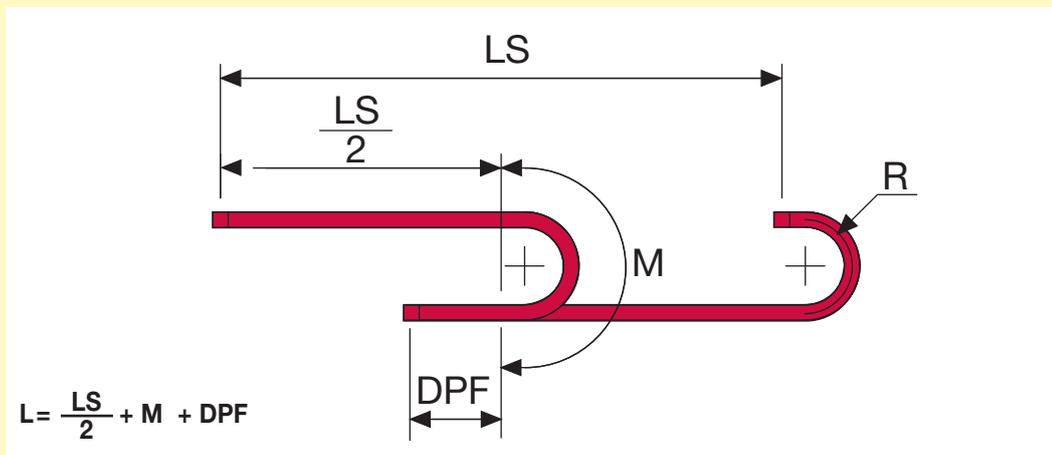

## Fixed point at the centre of total travel.

The chain length (**L**) is calculated by summarising the half stroke  $\frac{LS}{2}$  to the nominal value (**M**) of the bending radius.

The value is then rounded up the multiply of the chain's pitch for nylon cable chains and to an odd multiply for steel chains.

## Fixed point not positioned at the centre of total travel.

The chain length (**L**) is calculated by summarising the half stroke  $\frac{LS}{2}$  to the nominal value (**M**) of the bending radius and the distance (**DPF**) from fixed point to centre of total stroke.

The value is then rounded up the multiply of the chain's pitch for nylon cable chains and to an odd multiply for steel chains.

Where:

$L$  = Length of chain

$\frac{LS}{2}$  = Half travel distance

$M$  = Length of curve  $(\pi \times R) + (2 \times P)$

$DPF$  = Distance from fixed point to centre of total stroke

$P$  = Pitch

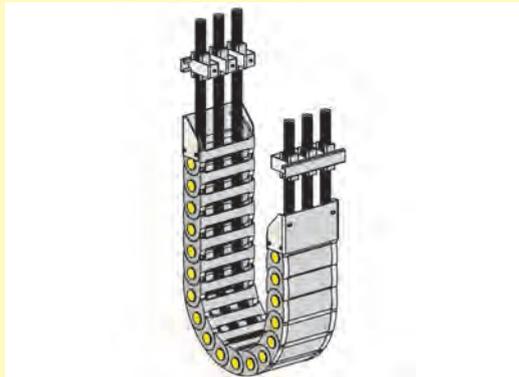

# Going Further

## Vertical Applications

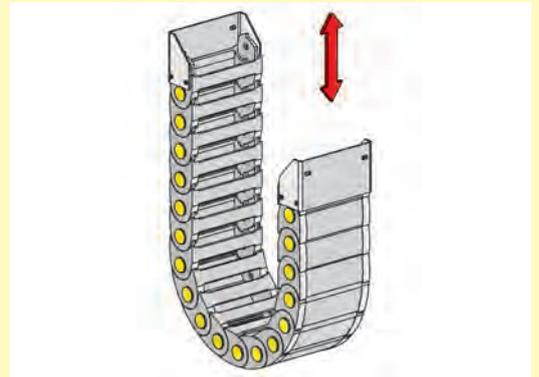

The problems related to vertical applications are solved by using Brevetti Stendalto cable chains. It is however necessary to respect the following:

The use of standard cable chains for vertical applications could result in difficulties due to the pre-set. we therefore recommend to specify: *“without pre-set for vertical applications”* when ordering. By doing this the cable chain will be delivered to you without pre-set.

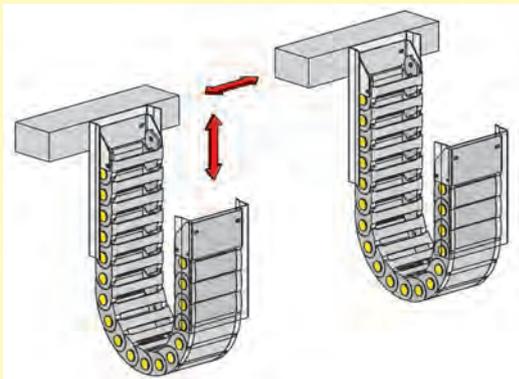

2

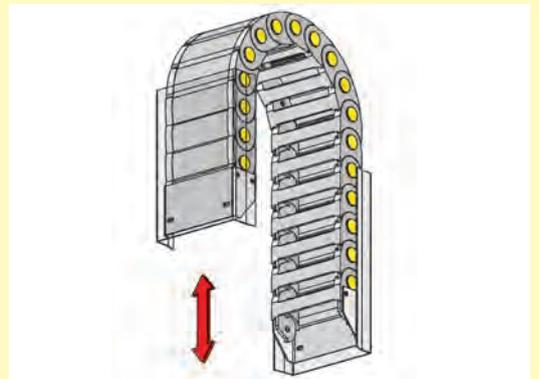

*The placement of the cable/hoses is very important to ensure the application works properly. Cables/hoses have to be fixed at both ends using the appropriate accessories so as not to make their weight disturb the cable chain. In this type of application the cable chain should only guide the cables/hoses during their movement.*

*If the application only concerns one vertical movement the cable chain does not need any particular support.*

*If the cable chain also moves across and/or longitudinally, certain measures have to be taken laterally. For special applications, frames with completely closed guiding systems are available.*

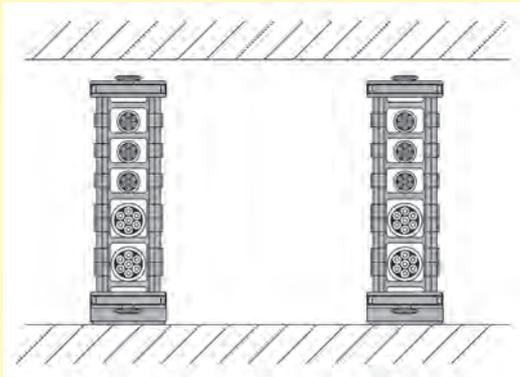

*When applying the cable chain in this way some support is needed to avoid the chain to unbalance itself outwardly. Generally the cable chain must be supported both on the fixed and mobile points.*

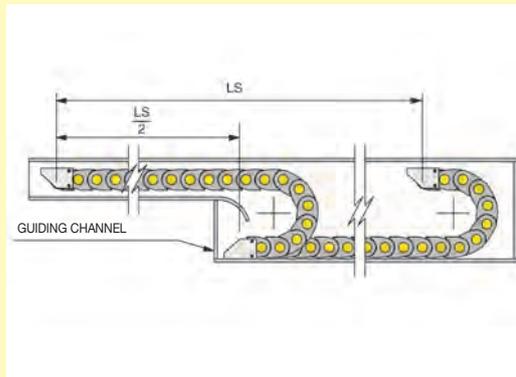

# Going Further

## Horizontal Applications on Their Sides

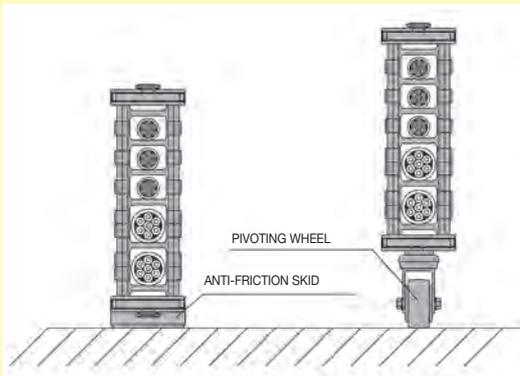

Brevetti Stendalto cable chains can be mounted on their sides.

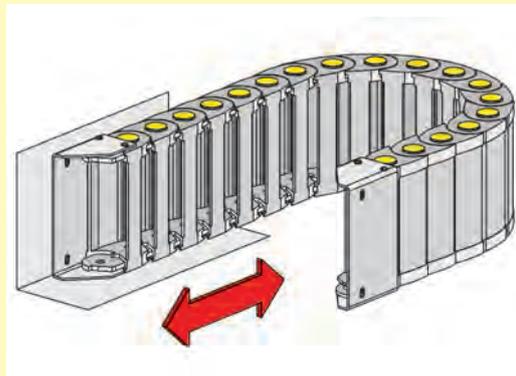

This kind of mounting becomes necessary when there is a limited space upwards and mounting the chain normally would take up too much space.

For particularly long applications a guiding channel can be designed.

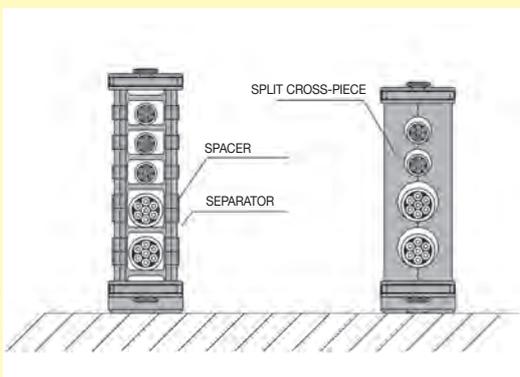

To make the movement easier and to reduce any friction on the cable chain, special changeable anti-friction skids or pivoting wheels have been designed.

If there is no possibility for a plane to support the cable chain during its movement, Brevetti Stendalto chains can be applied without support taking into consideration the following factors:

- total travel distance LS
- added weight
- velocity and acceleration
- frequency of usage

For this kind of application, it is recommended to discuss with our technical office.

Particular attention should be drawn to determine the section of the cable chain, in fact, the mounting on its side of the chain means that cables/hoses have a tendency of bunching towards the ground and being squashed.

To avoid this, there are special spacers which are positioned between the separators or otherwise special split aluminium or PVC cross pieces to be applied.

# Going Further

## Long Horizontal Travel Distance

Cable chains are used more frequently on long travel distances as a valid alternative to the traditional systems of conductor bars or to festoon systems, and offer the following advantages:

- The possibility of the combined transportation of hydraulic cables/tubes.
- The possibility of use also in critical environments (humidity, textile dust, negative chemical and atmospheric components etc.).
- High velocities and values of acceleration.
- Notably shorter installation times.
- Drastic reduction in the time taken for maintenance.

Sliding series is the integrated sliding skid which permit the chains to slide on themselves reducing the friction due to the special polymers used.

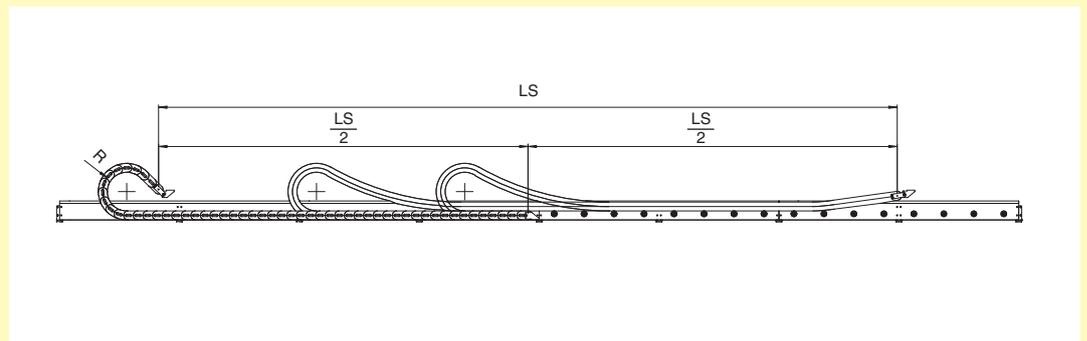

The dimensions of the skid allow the chain to keep itself stable in applications with high velocities.

On request it's possible to produce cable chains with special polyamides for applying in particularly aggressive environments.

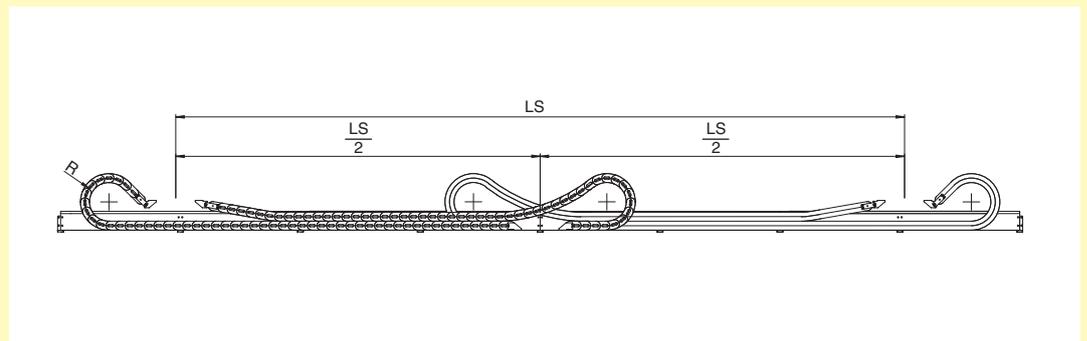

The triple pins guarantee more reliability and strength even in applications with the added weight being very high. The chains in the Sliding series have been tested using torsion, wear and tear tests passing the tensile yield stress with extremely good results, above high normal values (e.g. 318 21000 N).

The special aspect of the cable chains in the

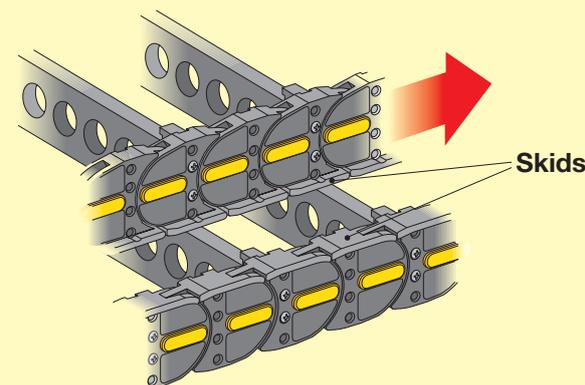

*In these applications, the chain without self-supporting capacity, slides in its own guiding channels. For the first half of the travel distance the chain slides on itself, whilst in the second half it is supported by its own rollers or plates for sliding.*

*In double chain applications, the chains slide on themselves in both directions.*

*A particular of the skid in the sliding of the chains in the Sliding series.*

318 type chain.

318 type chain.

# Going Further

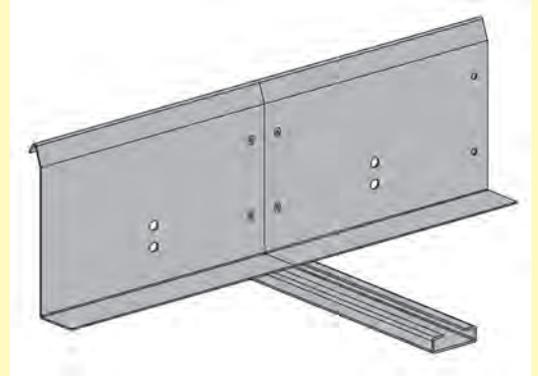

## Guide Channels for Sliding

For good results when using cable chain in an application with a long travelling distance it is necessary to respect the following instructions when installing the guide channel for sliding:

2

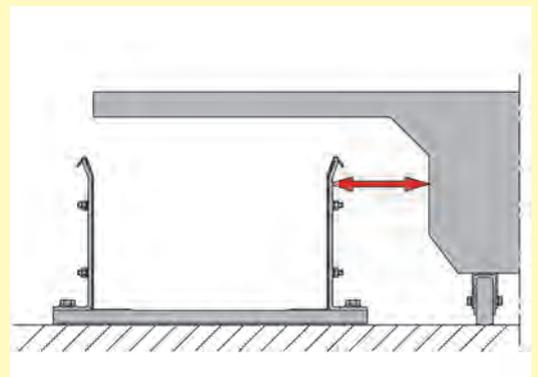

Guide channel for chains of the Sliding series.

Verify that the sides are aligned properly to avoid any internal edges in the guide channel which could disturb the cable chain's route.

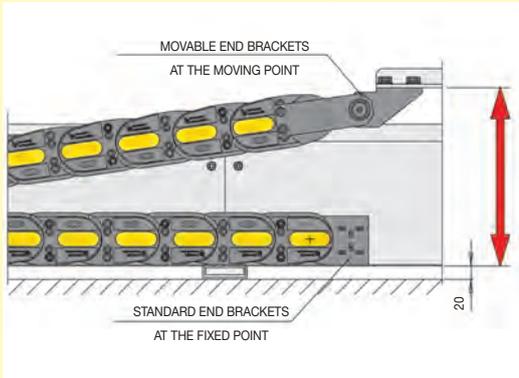

Verify that the plane on which the guide channel for sliding is mounted is perfectly aligned and smooth.

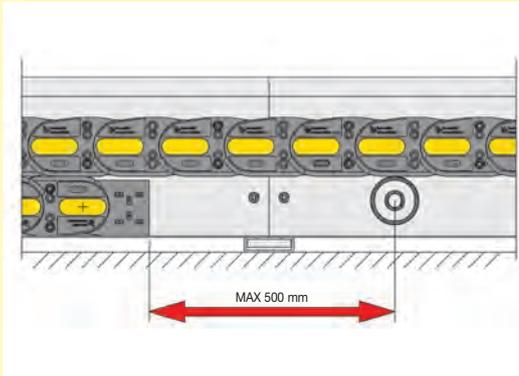

Verify that the distance between the guide channel for sliding and the towing arm is the same for the whole travelling distance.

## How to Install the Cable Chains in the Guide Channel

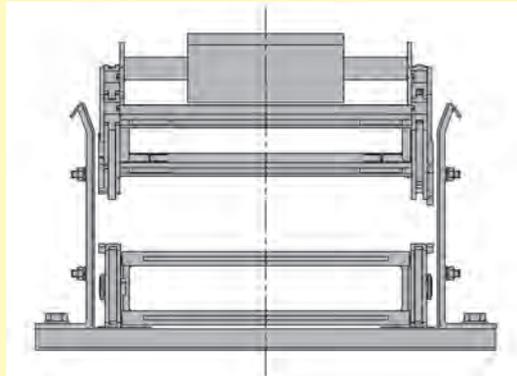

For a perfect installation of the cable chain in the guide channel you should take the following steps:

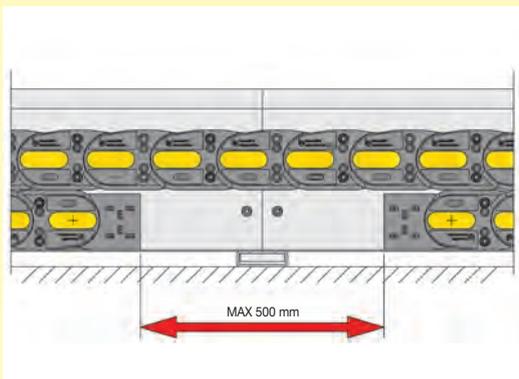

Install the cable chain with the standard end brackets at the fixed point and with the movable end brackets at the moving point respecting the height listed in the catalogue.

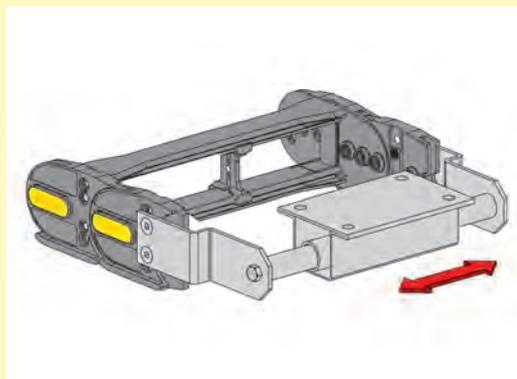

Reduce as much as possible the distance between the fixed point of the cable chain and the starting point of the rollers or sliding plane.

Install the mobile point of the cable chain aligning it exactly to the longitudinal travel distance in such a way so that during its movement it does not touch the internal part of the guide channel (Fig. A).

In the case of a double chain application ensure that the distance between the two fixed points doesn't exceed 500mm.

To facilitate this operation Brevetti Stendalto has developed and created a special movable end bracket which guarantees a perfect alignment between the chain and the towing arm (Fig. B).

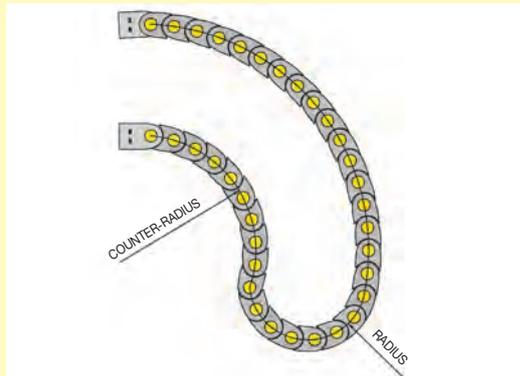

# Going Further

2

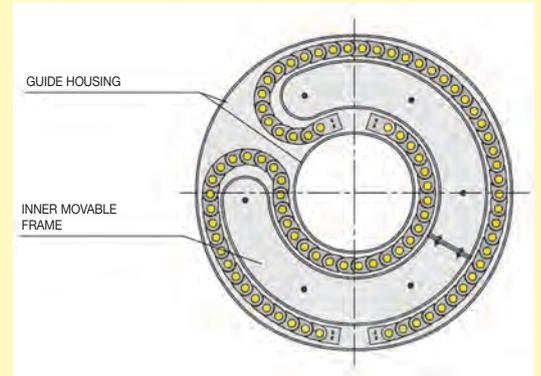

## Rotating Horizontally

For certain applications it necessary that the cable chains perform an opposite movement from that determined by the radius of the curvature (counter-radius chains). All Brevetti Stendalto chains, except those from the

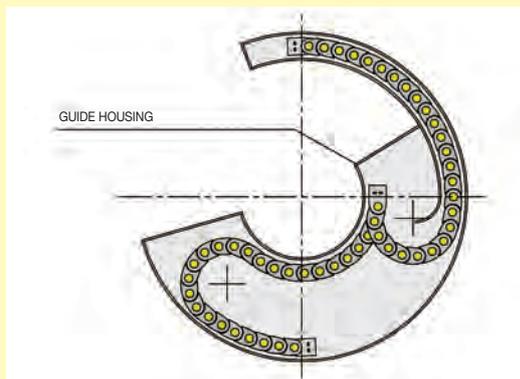

PROTECTION series, can be supplied with this counter-radius. Generally the chains with counter-radius are used to resolve the problems relative to rotations where, in this case, it would not be possible to use cable chains from the ROBOT series.

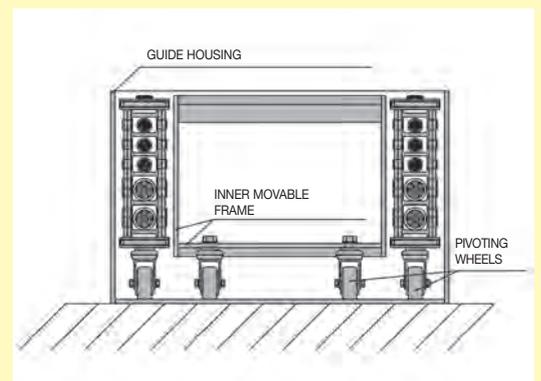

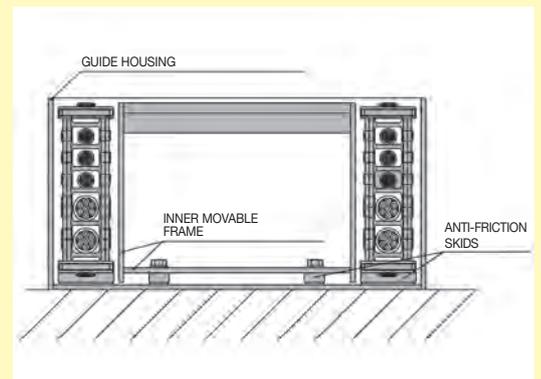

With the use of counter-radius chains it is possible to create rotations both on small and large equipment (e.g. parabolic antennas, rotating tables, cranes, telescopes).

For applications with rotations over 180° it is necessary to use two cable chains. For a correct usage they should be guided both internally and externally. A special inner movable frame, mounted on anti-friction skids or pivoting wheels in combination to the guide housing guarantees the rotation.

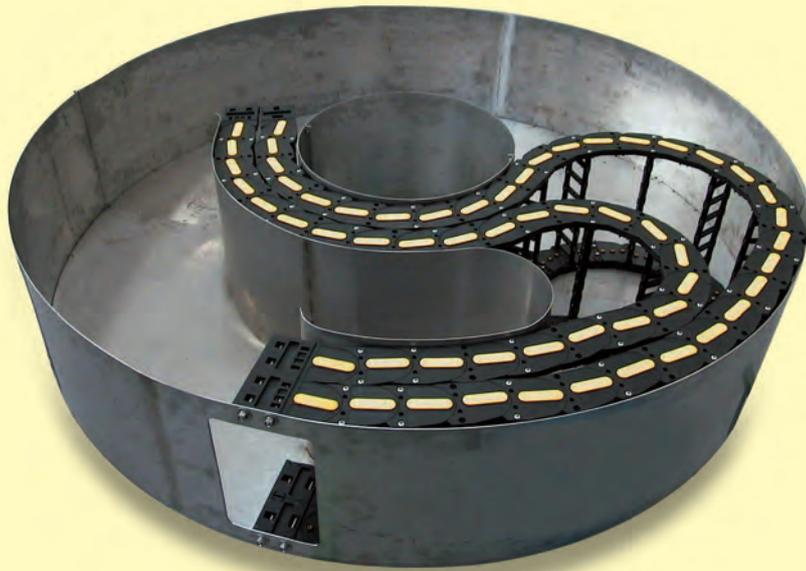

For applications with rotations up to 180° it is possible to use only one cable chain. For a correct usage it should be installed with a guide housing.

To facilitate the sliding and reduce the friction of the cable chain, special changeable skids or pivoting wheels are taken into account. With this kind of application it is also possible to rotate vertically. Seen the particular aspects of these applications we advise you to contact and consult our technical office.

## Application of Horizontally Rotating Chains

Chains can reach a maximum rotation of 540°. For a correct usage they should be guided both internally and externally.

*Application with 2 superimposed chains.  
Rotation 180°*

*Application with 2 chains.  
Rotation 370°*

## Rotation with ROBOT Type Chains

In its continuous technological evolution, Brevetti Stendalto has revolutionised since 1989 the concept of circular chains introducing the chains from the "ROBOT" series that, due to the particular construction of the links, permit them to rotate up to 540°.

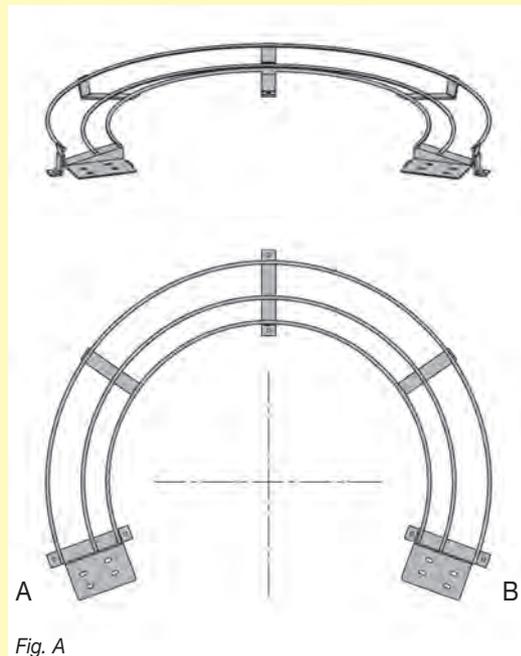

Fig. A

The stability of the chains permits rotations at higher velocities without the need for guiding supports. Only the base on which the cable leans has to have a configuration inclined to make its own travel distance easier. Appropriate support guides are available if it is not possible to take them directly from the machine.

Welding robot equipped with a nylon cable chain type 510 and guide support.

The chains from the "ROBOT" series, like all Brevetti Stendalto chains, can be modified for work in special applications.

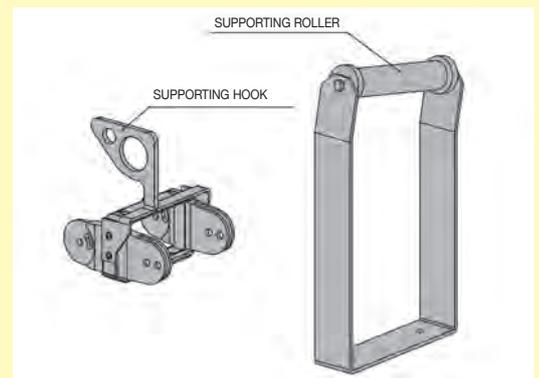

When the use of one cable chain is not sufficient to contain all the cables/hoses it's possible to use several chains in the same application to increase the space to hold them.

## Supporting Hook

This must be selected according to the method of chain fixation.

-Left type with left fixed point chain (A)

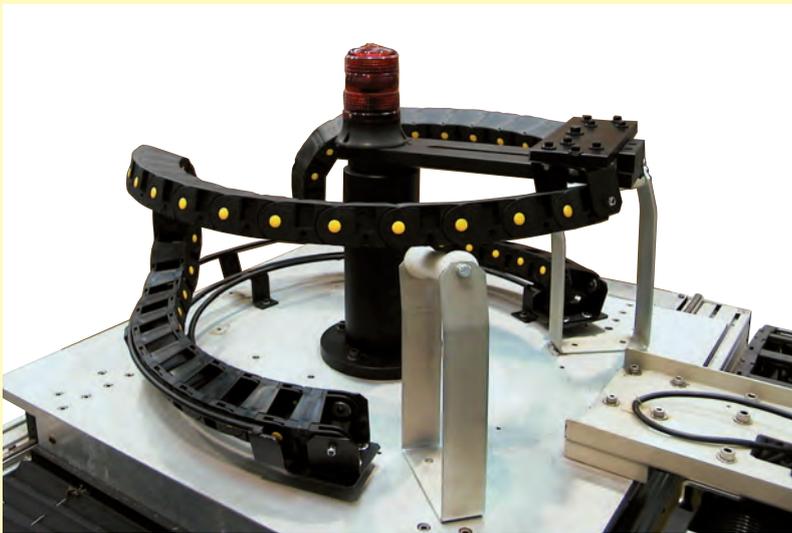

-Right type with right fixed point chain (B)

The chains from the "ROBOT" series are self-supporting and they do not need any support up to 200°. For applications with rotations exceeding that value it is necessary to use its own appropriate accessories. To reduce the problems of taking up too much space which generally is the case with the supports, especially on robots, Brevetti Stendalto has developed a series of supports which are capable of solving the problem.

## Applications with Robot Series Chains

Using support rollers or support hooks, chains can reach a maximum rotation of 540°.

*Support rollers view.*

*Support hooks view.*

# Going Further

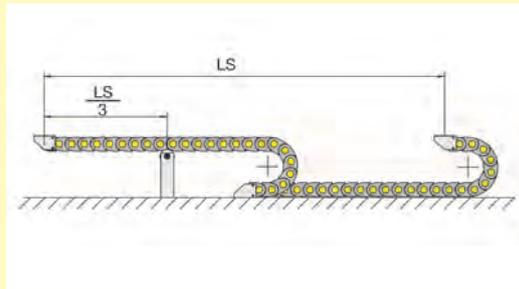

## Support Roller Units

For applications of cable chains with  $\frac{LS}{2}$  and weights not included in the area of the diagram of self-supporting capacity it is

necessary to use the appropriate support rollers.

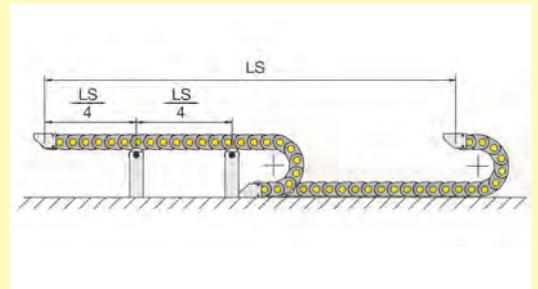

To decide on the number of support rollers needed, note the following:

### One Support Roller when:

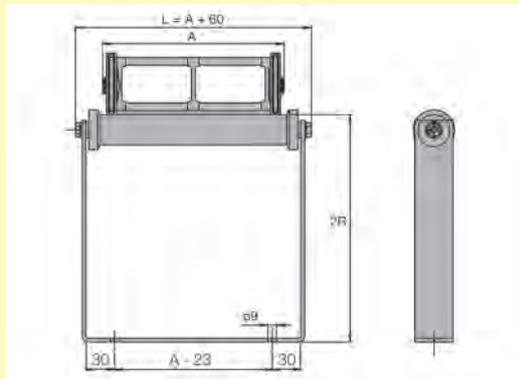

The length  $\frac{LS}{3}$  is included in the values of the diagram showing self-supporting capacity.

### Two Support Rollers when:

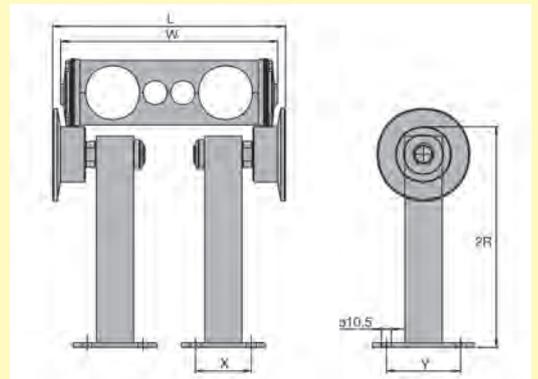

The length  $\frac{LS}{4}$  is included in the values of the diagram showing self-supporting capacity.

## Support Roller for Nylon Chains

## Support Roller for Steel Chains

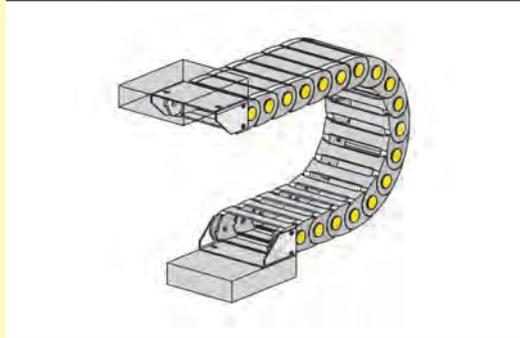

Chain Type	X	Y	L
20	70	100	W+22
30	70	100	W+22
35	70	100	W+26
40	70	100	W+26
45	130	180	W+26

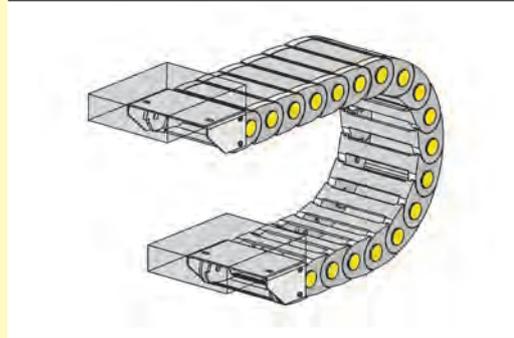

### Ways of Mounting End Brackets

The end brackets make the installation of the chains possible. They are available both in nylon and in steel. The end brackets in nylon, due to their particular construction with holes for mounting on three sides, allow the chain to be installed in the four positions seen below. For the end bracket in steel instead it is necessary to specify the position of mounting. If this is not specified it will be supplied in Pos.1. Our technical office is at your disposal to solve any installation query.

# Going Further

## Guide Channel

For a correct functioning of the cable chain it is necessary that during it's movement it lies on a flat surface. If these conditions do not exist a guide channel is necessary.

The guide channel is delivered in laminar zinc in pieces of 2000 mm. It is available on request in stainless steel.

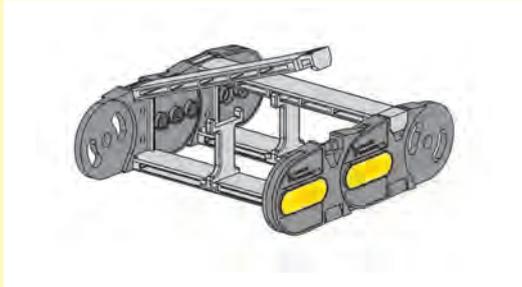

Guide channel for chain type 355.

## Split Cross Pieces Heavy/Sliding Series

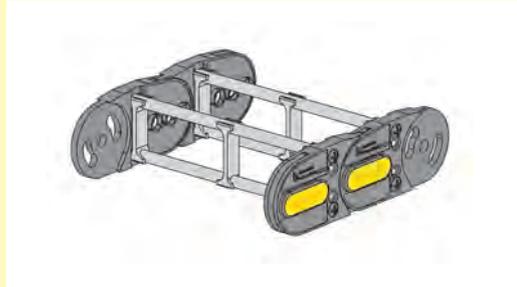

The chains from the Heavy and Sliding series are developed with two side-bands of chain connected with split cross pieces that can be

chosen between a wide number of styles to suit most various requests.

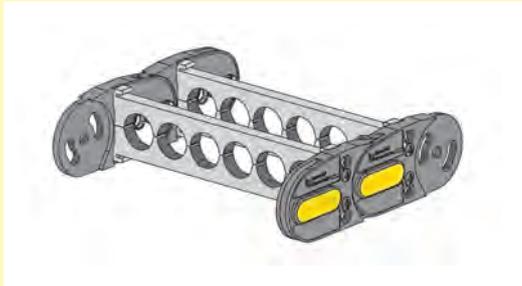

### Standard Versions:

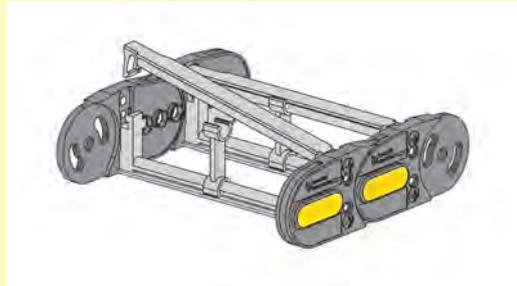

The new nylon split cross piece can open by an easy to open hinge, offering a security.

Aluminium rods screwed at the links. Maximum strength in every application. Possibilities in customising it's width. A separation of cables system.

Nylon split cross pieces with holes. Many possibilities of choice between the standard models or special version on request.

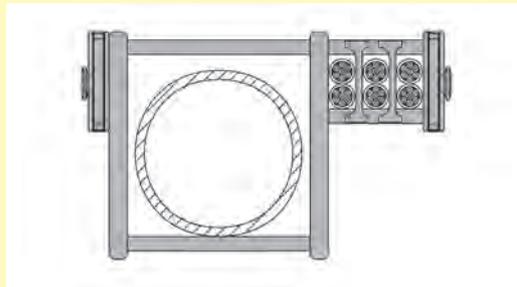

Nylon split cross pieces which open by a zip, to facilitate the operations of positioning the cables internally in the chain.

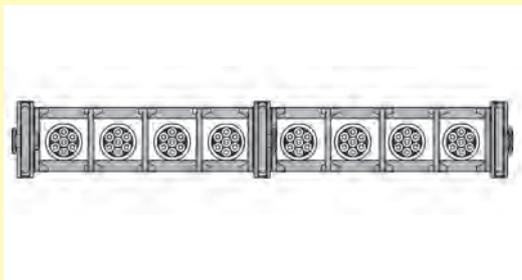

### Special Versions:

Split cross pieces made on request. The ideal solution in the case of numerous cables with limited amount of space.

Larger split cross pieces. For the transportation of hoses of notable dimensions.

Multiple side-band chains. If it was necessary to increase the self-supporting capacity and the stability when having a large number of cables.

# Materials Used

The Brevetti Stendalto cable chains in nylon are developed with a special polyamide reinforced with glass fibre, BRYLON 6. The high resistance to tension, the low coefficient of friction together with the general characteristics of the most evolved compound thermoplastics, allow the cable chains to be used in all environments and temperatures. The main characteristics of BRYLON 6 are:

## Self-Extinguishing

Brylon 6 has the certificate UL94HB. On request the use of the polyamide V0 or V2 can be used. The resistance at eventual sparks is good.

## UV Rays

Brylon 6 is resistant to UV rays and it's therefore suitable for external applications.

## Chemical Resistance

Brylon 6 is generally resistant to oils, grease, petrol, ammonia and water (sea water). Problems could arise with the presence of acids. (See the detailed table showing resistance to various chemical agents).

## The Colouring.

The standard colouring of the Brevetti Stendalto cable chains is to have the links in black and the pins in yellow.

This combination, apart from being eye-catching represents a further security measure, the chain

## Working Temperature

Brevetti Stendalto cable chains made of polymers can be used in application with a temperature range between  $-25^{\circ}$   $+125^{\circ}$ . In case of application with "continuous" temperature lower than  $-15^{\circ}$  and higher than  $+95^{\circ}$ , the mechanical values could be reduced. In both the cases Brevetti Stendalto is able to offer solutions using special compounds; please consult us. On request it is possible to create and develop cable chains using special polyamides to be used in the following applications:

## Ex-Proof

Cable chains complying with ATEX Directive 94/9/CE. Nylon cable chains, to be used in explosion high-risk environments, can be supplied made of the special material BRYLON AD. For further information please refer to Brevetti Stendalto's Technical Office.

## Clean room-proof

To be used in clean rooms. The standard version of the cable chain 305A009 has been tested and proved to be Class 1. For further information you may require the proper documentation to our technical department.

Length of chain (L)

half travel distance ( $\frac{LS}{2}$ )

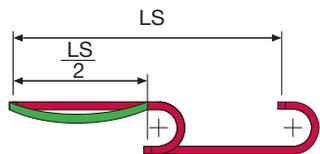

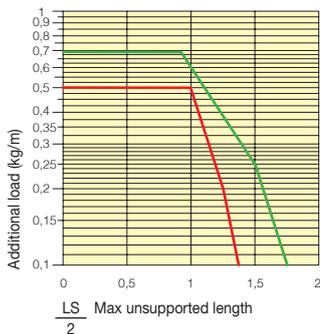

plus length of curve (M)

$$L = \frac{LS}{2} + M$$

## Self-Supporting Capacity Diagram

The maximum length of the self-supporting capacity ( $\frac{LS}{2}$ ) in relationship to the weight of the cables and hoses contained per linear metre.

The area in the diagram considers the difference of weight between various widths of chain.

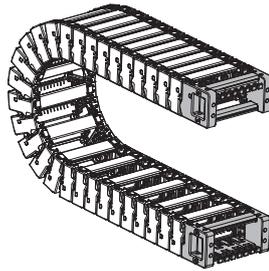

Red for self-supporting chain, green for chain in admissible sagging.

For applications with ( $\frac{LS}{2}$ ) and weights not included in the area of the diagram showing self-supporting capacity, verify the possible use of support rollers (see page 30).

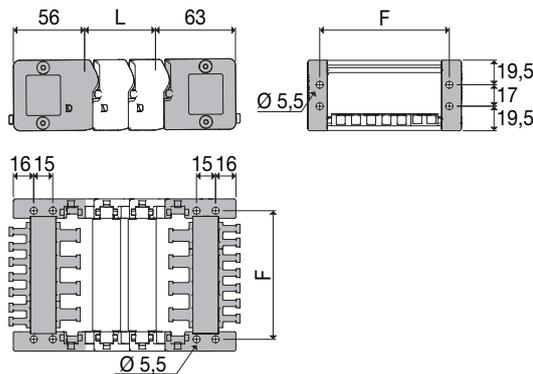

## End Brackets

The end brackets set containing four nylon brackets joined to the links allows the two ends of the chain to be attached to the equipment.

End brackets are equipped with tie-wrap clamps.

Chain can be fixed at both inner and outer-radius sides.

When operated under the specified test conditions, the cable guiding system X36SC060150 is suitable for use in cleanrooms fulfilling the specifications of the following Air Cleanliness Classes according to ISO 14644-1:

Test parameter(s)	Air Cleanliness Class
$V_1 = 0.5 \text{ m/s}; a_1 = 1.0 \text{ m/s}^2$	1
$V_2 = 1.0 \text{ m/s}; a_2 = 2.0 \text{ m/s}^2$	2
$V_3 = 2.0 \text{ m/s}; a_3 = 4.0 \text{ m/s}^2$	3
<b>Overall result</b>	<b>3</b>

Please note: transport damages, incorrect installation, aging behavior, etc. can influence the test result.

Nylon Cable Chain

4

Suitable to long travel distance.  
To choose the guide channel see page 56

Special tool to remove the connecting pivots:  
Part Number PZ010.

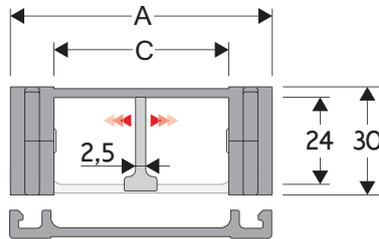

For further information please consult Brevetti Stendalto's Technical Office

# Serie Medium

## 305A Nylon Cable Chain with removable frames

### Inner height (D) 24 mm

Double share single link joining construction with large anti-friction single-pin. Frames removable from inner radius. Vertical separators are available. Wide frames on outer radius offer good protection. Due to its design with double-share lateral side, the chain is very robust, meanwhile offering very low friction.

### Separator

- Unassembled	Part.no S305A
- Assembled	Part.no S305AMC

### Pin

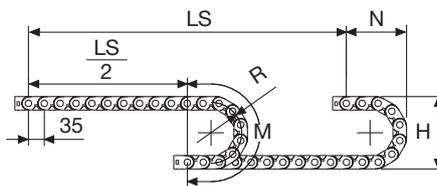

Part.no PG305

### Technical characteristics when self-supported

Speed	10 m/s
Acceleration	50 m/s <sup>2</sup>

For higher requirements please consult our technical dept.

Length of chain (L)  
Half travel distance ( $\frac{LS}{2}$ )  
plus length of curve (M)

$$L = \frac{LS}{2} + M$$

Version alu-drawn frames mounted each second pitch.

### Self-Supporting Capacity Diagram

The maximum length of the self-supporting capacity ( $\frac{LS}{2}$ ) in relationship to the weight of the cables and hoses contained per linear metre.

The red marking in the diagram area considers the difference of weight between various widths of chains assembled with alu-drawn frames every second pitch.

For applications with  $\frac{LS}{2}$  and weights not included in the area of the diagram showing self-supporting capacity, verify the possible use of support rollers (see page 30).

### End Brackets

The end brackets set allows the two ends of the chain to be attached to the equipment. Set complete with tie-wrap clamps available on request.

### Self-Supporting Capacity Diagram

The maximum length of the self-supporting capacity ( $\frac{LS}{2}$ ) in relationship to the weight of the cables and hoses contained per linear metre.

The red marking in the diagram area considers the difference of weight between various widths of chains assembled with rods every second pitch.

For applications with  $\frac{LS}{2}$  and weights not included in the area of the diagram showing self-supporting capacity, verify the possible use of support rollers (see page 30).

### End Brackets

The end brackets set allows the two ends of the chain to be attached to the equipment. Set complete with tie-wrap clamps available on request.

250	564	350	920	1055	2410
300	664	400	1080	1295	2970

Length of chain (L)

Half travel distance ( $\frac{LS}{2}$ )

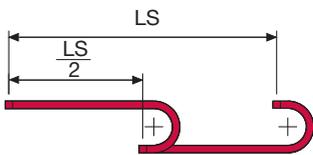

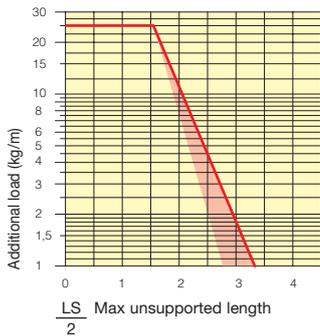

plus length of curve (M) or (M1)

$$L = \frac{LS}{2} + M \text{ or } M1$$

### Self-Supporting Capacity Diagram

The maximum length of the self-supporting capacity ( $\frac{LS}{2}$ ) in relationship to the weight of the cables and hoses contained per linear metre.

The red marking in the diagram area considers the difference of weight between various widths of chain.

For applications with  $\frac{LS}{2}$  and weights not included in the area of the diagram showing self-supporting capacity, verify the possible use of support rollers (see page 30).

### Self-Supporting Capacity Diagram

The maximum length of the self-supporting capacity ( $\frac{LS}{2}$ ) in relationship to the weight of the cables and hoses contained per linear metre.

The red marking in the diagram area considers the difference of weight between various widths of chains assembled with nylon frames every second pitch.

For applications with  $\frac{LS}{2}$  and weights not included in the area of the diagram showing self-supporting capacity, verify the possible use of support rollers (see page 30).

### End Brackets

The end brackets set allows the two ends of the chain to be attached to the equipment. Set complete with tie-wrap clamps available on request.

*Inner surface of chain  
completely smooth*

*Special End Brackets on  
moving end of chain*

*Triple connecting Pivot Pin which offers high integrity in high performance applications*

*Nylon separator. Cables can be laid apart from each other*

*Wide range of cross pieces available in the following types:  
Open and close, with a "Snap-Fit" action  
Aluminium Rods  
With Pre-Drilled Holes*

*Integrated skids which permit the chain to slide on itself. No wearing thanks to special polymers*

## 326SU

### Nylon Sliding Cable Chain with opening frames

#### Inner height (D) 37 mm

Strong double share Sideband & Frame construction with large anti-friction triple-pin. The chain incorporates large sliding-skid surfaces to offer durability, even with high speed/loads. Frames opening from inner radius and outer radius. As standard the chain comes with frames every second link, on request with frames every link. Modular separator systems are available.

#### Separator

- Unassembled Part.no S306SM

## 319ZE

### Nylon Sliding Cable Chain with opening frames

#### Inner height (D) 75,5 mm

Strong double share Sideband & Frame construction with large anti-friction triple pin. The chain features screwed-on interchangeable sliding skids to offer durability even with high speed and loads. Frames open from outer radius.

As standard the chain comes with frames every second link, on request with frames every link. Modular separation systems are available.

700	1510	2785	6600

Version with frames mounted on every pitch.

## End Brackets

The end brackets set allows the two ends of the chain to be attached to the equipment. One set includes two pivoting end brackets to be installed at the moving point and two standard steel end brackets to be installed at the fixed point.

# Guide Channel

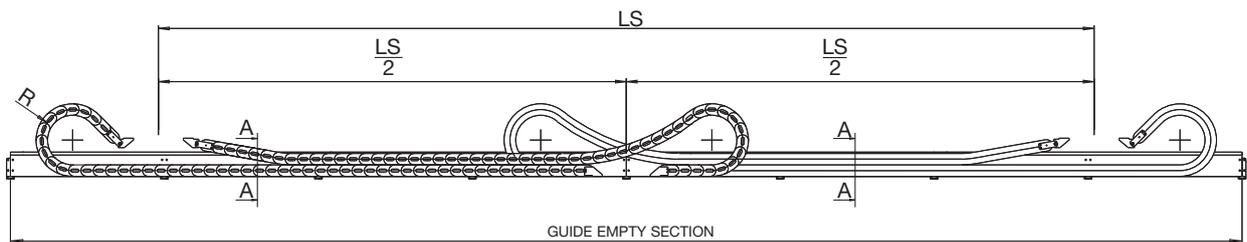

445-660A-770A-326-328-20P-30P-60-H45-H57

Special guide channel allows the use of the chain for long travel distance.  
Available in galvanised steel and, on request, in stainless steel.

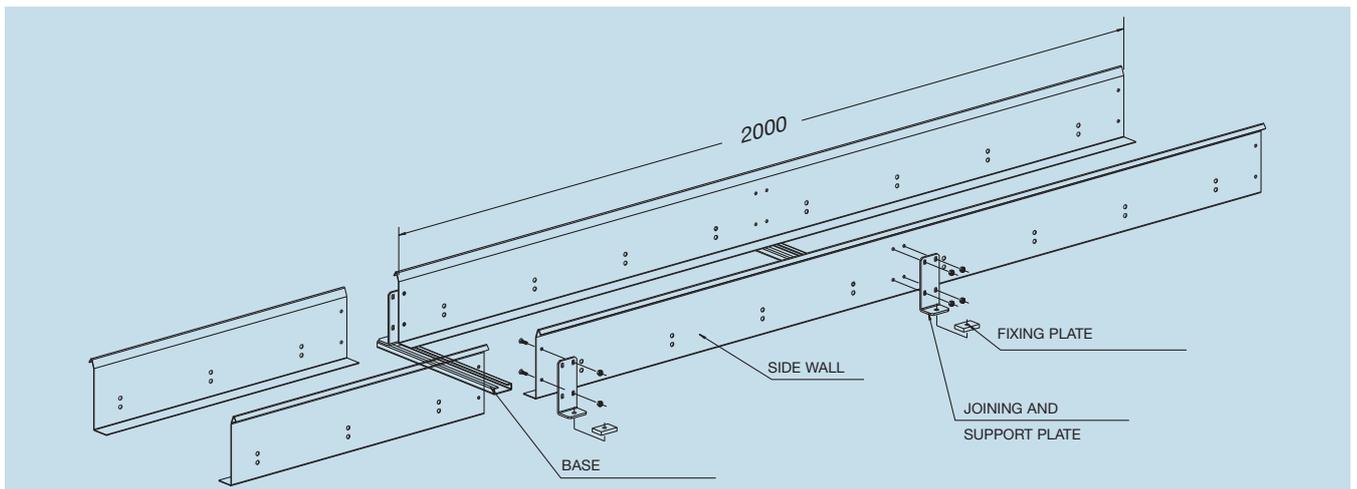

## Single Chain Application

## Double Chain Application

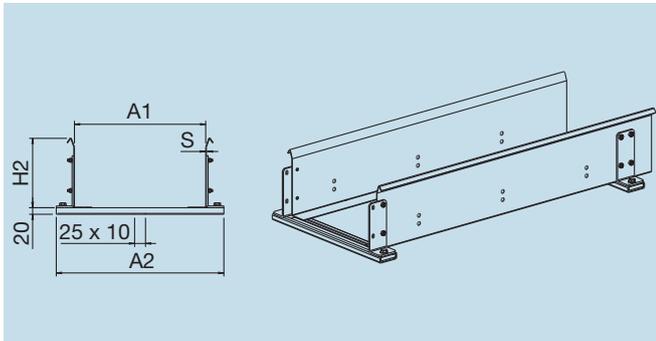

Channel guide is available in assembling kit composed by:  
side walls 2 m standard length  
joining and support plates  
fixing screws  
base  
sliding device (nylon wheel/steel or plastic plate)

### MULTIFLEX chain for 3D movements with opening frames

Chain for multi-axis movement, for application on robots and new-generation work centers, fully-enclosed, with opening frames.

Inner diameter mm	Outer diameter mm	Minimum bend radius mm	Pitch mm	No. of links per meter	Weight kg/m	Torsion per meter	Lodged utilities
63	77	100	18.5	54	1.6	$\sim \pm 540^\circ$	max. $\text{Ø } 20$ mm

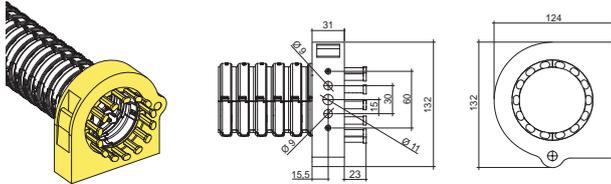

## Fixation accessories

### Fixation brackets with clamping combs

Standard bracket set with clamping combs.

This product is used at the extremities of MULTIFLEX chain.

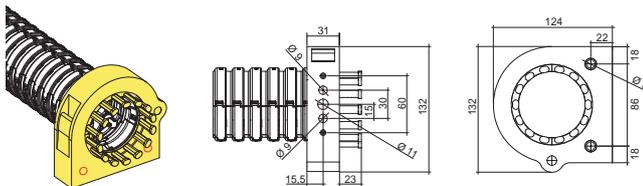

Type of latch	Part No.
Nylon	AMF65K01
Zinc-plated steel	AMF65M01

### Fixation brackets with clamping combs Frontal fixation

Standard bracket set with clamping combs, for frontal fixation.

This product is used at the extremities of MULTIFLEX chain.

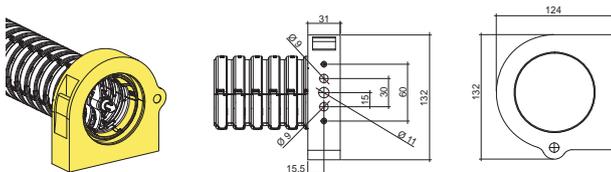

Type of latch	Part No.
Nylon	AMF65K01F
Zinc-plated steel	AMF65M01F

### End and intermediate fixation brackets

Standard bracket set without clamping combs.

This product can be used anywhere on MULTIFLEX chain.

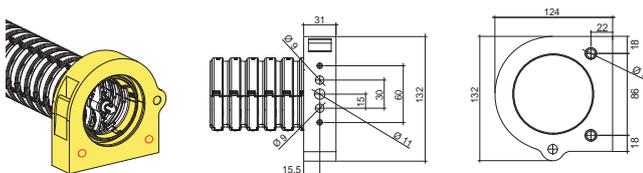

Type of latch	Part No.
Nylon	AMF65K02
Zinc-plated steel	AMF65M02

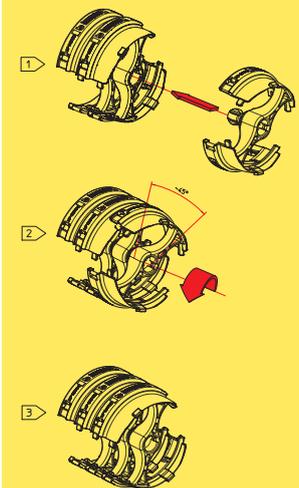

### End and intermediate fixation brackets Frontal fixation

Standard bracket set without clamping combs, for frontal fixation.

This product can be used anywhere on MULTIFLEX chain.

Type of latch	Part No.
Nylon	AMF65K02F
Zinc-plated steel	AMF65M02F

## MFC65100

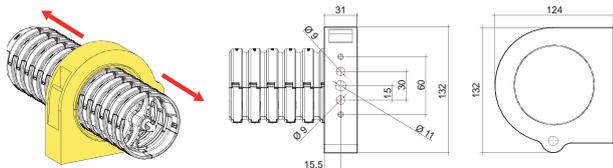

### MULTIFLEX chain for 3D movements with opening frames

#### Protection and guiding accessories

##### Sliding fixation brackets

Sliding bracket set.

This product can be used anywhere on MULTIFLEX chain.

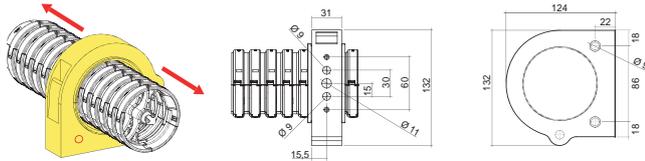

Type of latch	Part No.
Nylon	AMF65K03
Zinc-plated steel	AMF65M03

##### Sliding fixation brackets Frontal fixation

Sliding bracket set, for frontal fixation.

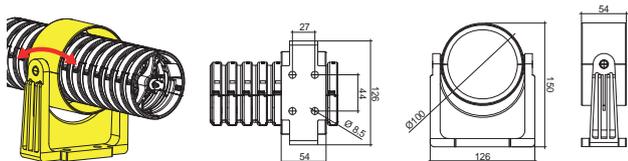

This product can be used anywhere on MULTIFLEX chain.

Type of latch	Part No.
Nylon	AMF65K03F
Zinc-plated steel	AMF65M03F

##### Oscillating guiding support with ring

Allows to guide passage of chain, maintaining all degrees of liberty of movement.

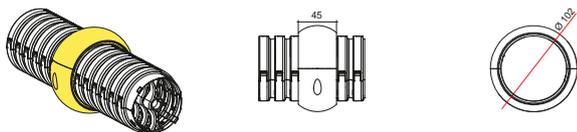

Part No.
ASO65

##### Protection ring

Bumper and rotating protection against hard shocks and extreme friction.

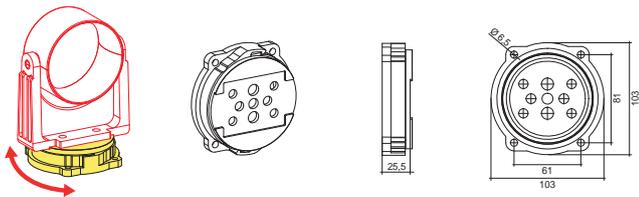

This product can be used anywhere on MULTIFLEX chain.

Part No.
PCM65

### Rotating base

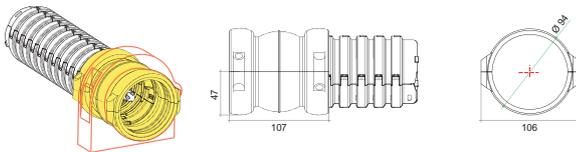

Universal rotating flange, usable with any fixation device. Allows rotation of fixation brackets and pivoting forks.

Part No.  
**PADFB-70**

### Connection jaw

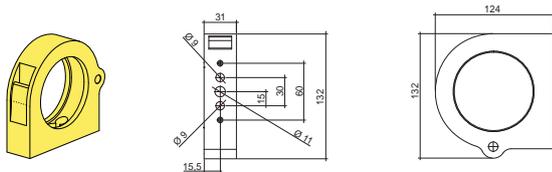

Connector between MULTIFLEX chain and corrugated sheath NW70, or between chain and multi-holed rubber seal. To combine with one fixation brackets type PASSB-70K or PASSB-70M.

Part No.  
**PAVGB-70/8529**

### Fixation bracket

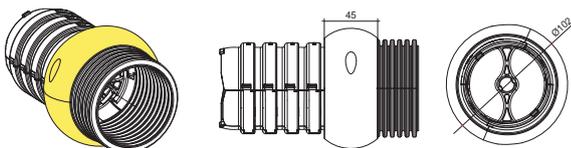

To combine with Part No. PAGB-70/8529.

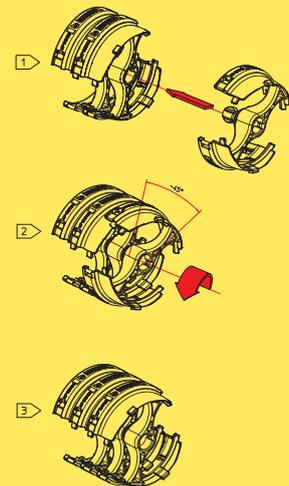

Type of latch	Part No.
Nylon	<b>PASSB-70K</b>
Zinc-plated steel	<b>PASSB-70M</b>

### Connection ring

Connector between MULTIFLEX chain and corrugated sheath NW70.

Part No.  
**GJM65**

## Kevlar protective coat

### Non-opening Kevlar protective coat for dynamic applications

Coat made of Kevlar aramidic fiber on one side; the other side features an aluminum layer in relief that covers the outer surface and reflects up to 95% of I thermal radiations.

Protects against weld spurts up to 540 °C.

Kevlar tissue offers good resistance to oils, greases, acids, bases, and solvents in low concentration.

The reflecting surface offers good resistance to UV rays as well.

#### Technical data

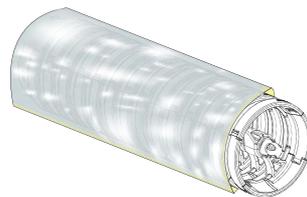

Thickness: 0.35 mm

Specific weight: 1.44 / 1.45 g/cm<sup>3</sup>

Pulling resistance: 2500 N/50 mm

Flammability: non-flammable (up to DIN 4102B1)

Part No.	Item No.
500 mm	<b>KA04S08005</b>
1000 mm	<b>KA04S08010</b>
1500 mm	<b>KA04S08015</b>

## 495 Circular Nylon Cable Chain with removable frames

### Inner height (D) 35 mm

Double share Sideband & Frame construction with large anti-friction single-pin.  
Frames removable from inner radius.

### Pin

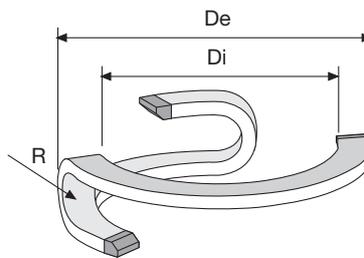

Part.no PG305

### Technical characteristics

Speed	180°/s
Acceleration	180°/s <sup>2</sup>

For higher requirements please consult our technical dept.

495	360	26

4

## Steel End Brackets

The end brackets set, containing two steel plates screwed to the links, allows the two ends of the chain to be attached to the equipment. The end brackets are installed in one position offering the possibility of attaching the chain externally. (Fig. A)

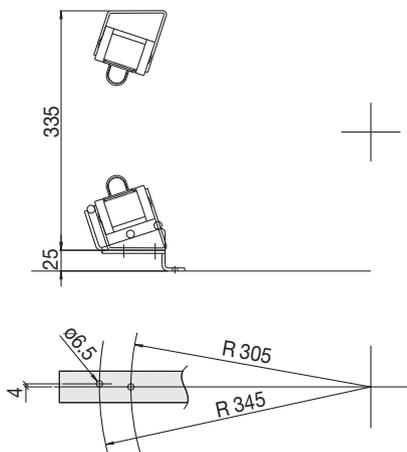

Fig. A

## Support Guide

For correct functioning of the chain it is necessary that the installation is done in a specific position.

For this reason Brevetti Stendalto has observed and created a support guide which can do this. (Fig. B)

For particular applications it is possible to create support guides with attachment plates and special dimensions.

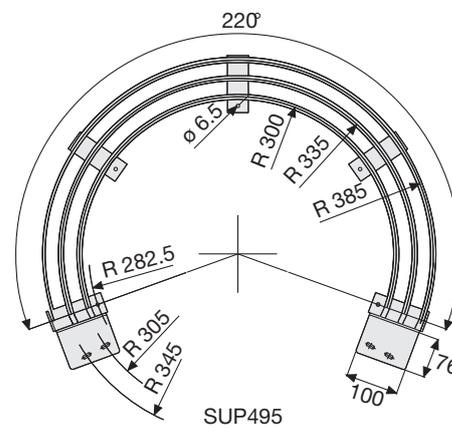

Fig. B

Chain equipped with aluminium draw plates every pitch: complete the code by inserting the letter D. Ex. 30LT156250[D]

#### Machined Cross Frame

Machined cross frames 30LA available on request for bending radius listed below. Custom solutions for machined cross frames realization, based on customer's and/or specific requirements. Please contact Brevetti Stendalto's Technical Department for further information.

R	H*	N	M	N1	M1
mm	mm	mm	mm	mm	mm
150	388	290	670	830	1770
220	528	360	890	1145	2515
250	588	385	980	1255	2800
305	698	440	1150	1450	3285
400	888	540	1450	1740	4065
535	1158	675	1880	2110	5105

\*The height H should be increased by 10 mm/m approx. because of preload. In case of limitation to the available space, refer to the Technical Dptm.

Length of chain (L)

Half travel distance ( $\frac{LS}{2}$ )

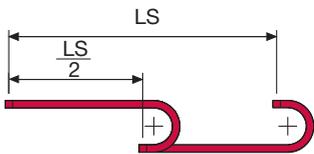

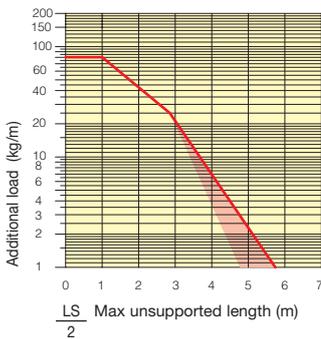

plus length of curve (M) or (M1)

$$L = \frac{LS}{2} + M \text{ or } M1$$

### Self-Supporting Capacity Diagram

The maximum length of the self-supporting capacity ( $\frac{LS}{2}$ ) in relationship to the weight of the cables and hoses contained per linear metre.

The red marking in the diagram area considers the difference of weight between various widths of chain assembled with frames every second pitch.

For applications with  $\frac{LS}{2}$  and weights not included in the area of the diagram showing self-supporting capacity, verify the possible use of support rollers (see page 30).

### Bright Zinc Plated Steel End Brackets

The end brackets set, containing four steel plates screwed to the links allows the two ends of the chain to be attached to the equipment.

\* The height H should be increased by 10 mm/m approx. because of preload. In case of limitation to the available space, refer to the Technical Dptm.

### Self-Supporting Capacity Diagram

The maximum length of the self-supporting capacity ( $\frac{LS}{2}$ ) in relationship to the weight of the cables and hoses contained per linear metre.

The red marking in the diagram area considers the difference of weight between various widths of chain.

For applications with  $\frac{LS}{2}$  and weights not included in the area of the diagram showing self-supporting capacity, verify the possible use of support rollers (see page 30).

### Bright Zinc Plated Steel End Brackets

The end brackets set, containing four steel plates screwed to the links allows the two ends of the chain to be attached to the equipment.

# Cable Drag Chains in Steel for Long Travel Distance

The use of cable chains in applications with particularly long travel distances offers many benefits. The possibilities of the combined transportation of high power cables, signal cables and hydraulic hoses, together with ease of use and no need for maintenance, are the unquestionable advantages of the system. Specific applications, characterised by particularly aggressive conditions in the environment, require cable chains in steel. Brevetti Stendalto has offered for many years, with positive results their own system based on the use of two steel drag chains and a travelling internal supporting frame. The chains are arranged in a closed loop configuration, having

a fixed bracket and a movable towing bracket. A secondary similar closed loop, made of steel wire rope, drives the supporting frame along the entire travel at a suitable speed, thus ensuring a continuous support to relieve all stresses. In addition to this a trough is arranged to contain and guide the chain system along the total travel. The chains are fitted with wheels on ball bearings, to keep to a minimum the friction on the supporting frame. The supporting frame can be made both in galvanised steel, or if requested, in stainless steel.

5

35 chains with supporting frame applied to De Icing equipment at München airport (Germany). The length of the travel distance is 90 m and it's velocity is 90 m per minute.

# Special off-shore Applications

The Brevetti Stendalto steel cable chains have been used in Off-shore applications for many years. The high standard of quality required and the special materials needed are characteristics in these kinds of applications.

On request cable chains of special dimensions which have been personalised according to the clients needs are being used.

Platform "Oseberg"

A: 45 chain in stainless steel 316L

B: 45 chain in stainless steel 316L for rotations of  $\pm 180^\circ$

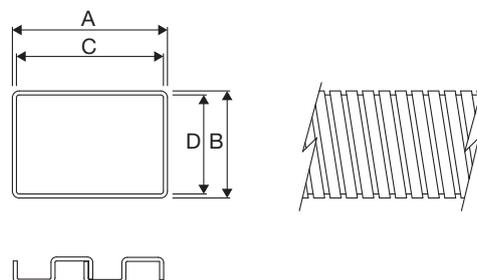

Platform "Tiffany"

Specially designed chains in stainless steel 316L  
Length of travel distance: 27 m  
Total weight of the chains: 13 Ton.

# Steel Cable Conduit

- Construction:** steel helix-wire conduit with packingless link junction
- Material:** cold-milled non-alloy steel grade St 3 (1.0330), DIN 1624, bright zinc-plated
- Quality:** highly flexible, resistant against traction and compression
- Use:** protection of electric cables and flexible hoses

# Flexible Cables for Cable Chains

## Characteristics

Brevetti Stendalto, aware of the continuous development of the high technology production processes, offers a number of flexible and high flexible cables, constructed according to the most recent technologies. These high flexible cables enable a continuous operation for multi-shift-work under conditions of extreme bending stress<sup>(1)</sup>, for example industrial robots, machine tools and for the working of wood, automation systems etc.

The protection control according to the DIN VDE rules, gives a certificate showing the high standard of quality of the Brevetti Stendalto cables.

The wide choice of products composed of different types of cables, allows us to answer to the growing demand from all parts of the technical department.

<sup>(1)</sup> The Brevetti Stendalto cables have been tested with accelerations exceeding 20 m/s<sup>2</sup> and speed of 6 m/s.

# Flexible Cables

## Installation

For correct installation of cables in the cable chain, it is important to follow the guidelines listed below:

- 1- The cables have to be installed and unrolled from the drum carefully to avoid damage. It is therefore important to follow the indications in Fig.1. The coil should not be unrolled from the centre, but it should be placed on a support or on a turning plane and then be unrolled starting from the external ends.
- 2- Check the minimum allowed bending radius of the chosen cable and compare it with the bending radius of the chain. For a correct installation, the last mentioned should be larger compared to the bending radius of the cable.
- 3- There must be at least 10%-20% free space between the cable diameters and the internal dimensions of the chain. Install the cables/hoses symmetrically in the chain with the larger and heavier towards the outside and the smaller and lighter in the centre. Further, it is necessary to separate the cables using the separators, available for all the chains, or the split cross pieces with holes done in the appropriate sizes according to the external diameter of the cable.
- 4- The cables/hoses must be placed and installed in such a way so that they can move freely side ways during the movement of the chain and also so that in the bending curve they do not cause any tension or traction on the cable chain.
- 5- The cables/hoses must be installed and fixed using the appropriate accessories (see pages 254/255), at both extremities of the chain.
- 6- Verify the installation of the cables in the chains with Brevetti Stendalto's technical office or request a personalised project by filling in the appropriate module (page 257).

(Fig. 2) It is important, when having high velocities and accelerations, to avoid the superimposing of the cables. Avoid contact between the different cables and hoses internally in the chain.

Fig. 1

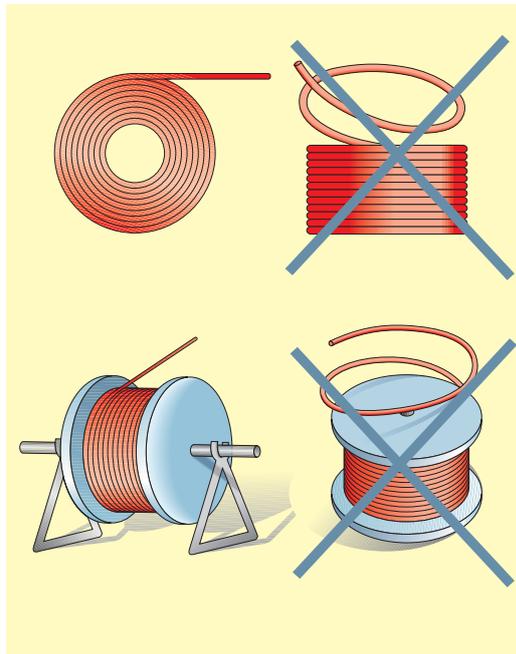

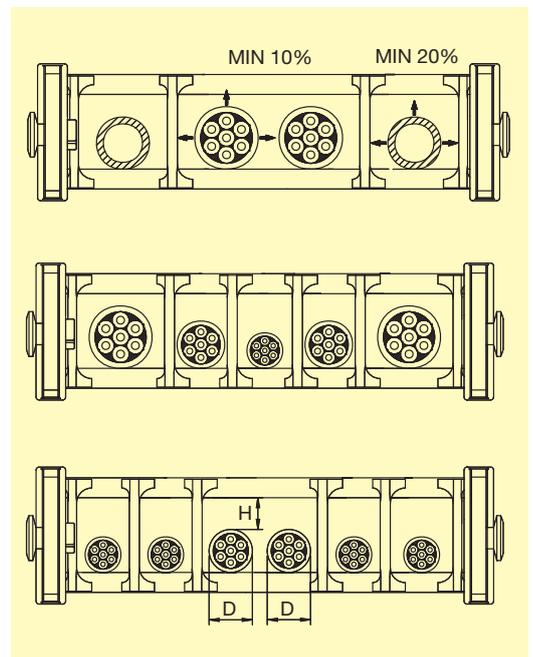

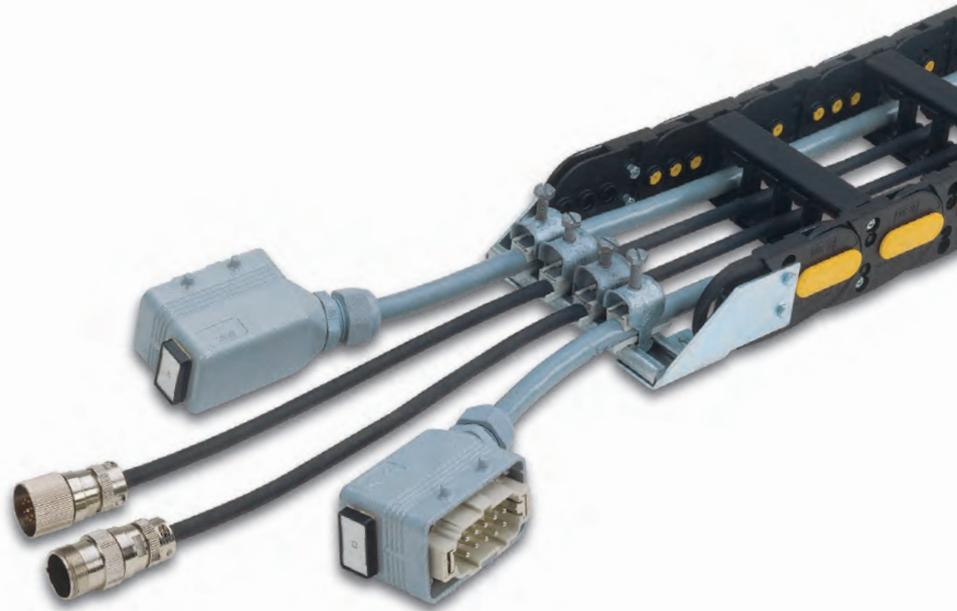

Fig. 2

## Ready to Install Chains with Electrical Cables

On request chain ready to be used with cables and plugs connected. Please contact our sales departments for further information.

## With Hydraulic Hoses

On request chain ready to be used with hydraulic hoses. Please contact our sales departments for further information.

## Custom-Built Packaging

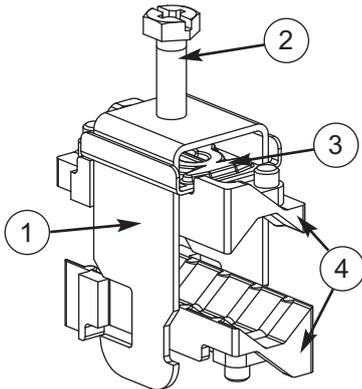

For very large chains, example offshore applications, harbour cranes, steel mills, Brevetti Stendalto offers on request custom-built

packaging, for save transport and facilitated assembling on-site.

# Stainless-steel cable clamps

In order to clamp cables at the end of the chain, Brevetti Stendalto offers a complete range of clamps in AISI 304 stainless steel. In combination with a specific mounting frame, clamps ensure proper management of cables.

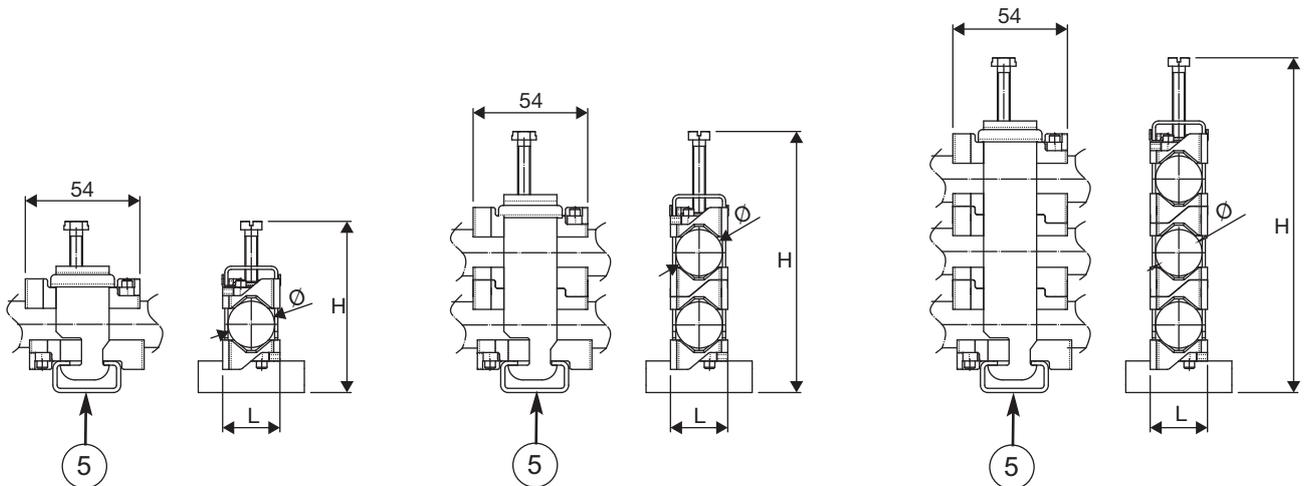

## FEATURES

- 1) AISI 304 stainless steel housing.
- 2) Self-locking AISI 304 stainless steel screw, hexagonal head, for flat or cross-head screwdriver. Torque 1-2 Nm.
- 3) AISI 304 stainless steel pressure plate.
- 4) Saddles in polyamide compound.
- 5) Base profile in AISI 304 stainless steel.

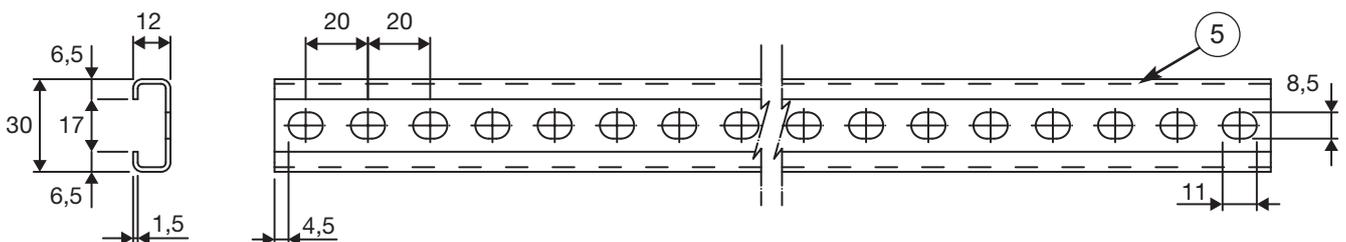

## RESISTANCE TESTS

- 1) UV test according to BS-ISO 105-B06.
- 2) Vibration test according to UNI 60068-2-6.
- 3) Working temperature: from -30 °C to +120 °C.

7
